Foreword

Key military indicators reported in this 25th edition of *World Military Expenditures and Arms Transfers (WMEAT)* suggest that 1995, the last year shown, may prove to be a pivotal year. Military spending took an upward turn in the developing countries as a group as well as in a number of regions, notably East Asia and South America, after dropping since 1986 except for the Gulf War years. Arms imports by the developing countries also turned up sharply in 1995, with increases appearing in the Middle East, East Asia, South America, and South and Central Asia. Armed forces numbers did not generally increase in 1995, but neither have they shown recent signs of falling appreciably in the developing group. On the other hand, for the developed country group all these indicators of military effort continued their decline from Cold War levels in 1995, with little sign of abatement.

Although the full long-term implication of these trends may be cloudy, it is clear that the work of arms control and nonproliferation is far from over. That conviction is supported by the difficulties being encountered in many of the growing number of international peace-promoting efforts, the ominous threat of terrorism, the military disorder in a number of regions, and the persistence of armed conflict potential around the globe.

In fact, the work of arms control and nonproliferation is daily facing new challenges and taking new paths. It is imperative that the toilers in this vineyard maintain and even increase their dedication, their persistent efforts, and ultimately, their successes, despite setbacks and discouragements.

John D. Holm
Director

Preface

This edition of WMEAT (pronounced "we-meet"), the twenty-fifth in the series issued by the U.S. Arms Control and Disarmament Agency, is intended to serve as a convenient reference on military expenditures, arms transfers, armed forces, and related economic data for 172 countries over the 1985-1995 decade. We have continued our efforts to provide comprehensive, up-to-date, and accurate data, accompanied by pertinent analyses and highlights.

Future editions are now available through the Standing Order Service of the Superintendent of Documents (see last page). Copies of this report may be obtained by placing an order with the Superintendent of Documents (telephone no. 202 512-1800).

This report is also available via the Internet on ACDA's Home Page: <http://www.acda.gov>. The Main Statistical Tables are also placed in a format that facilitates electronic use. Readers should be aware that additional analyses relating to WMEAT are expected to appear on the ACDA Home Page in the future.

Comments and questions regarding this publication are welcome. They may be directed to :

Highlights

Military Expenditures

Figure 1. World Military Expenditures: 1961-1995

World military spending of \$864 billion in 1995 was down 34% from the all time high of \$1.36 trillion in 1987 and marked the eighth consecutive drop (in 1995 dollars—Main Table I). It was also the lowest spending level since 1967.

As can be seen in Figure 1, the reduction in world spending can be credited to the developed country group (found mainly in Europe,[†] North America, and East Asia), where the downward trend also began in 1987 and closely followed that of the world. The developed group, making up over three-quarters of the world total, fell by a hefty 8%

[†] Regions and countries are listed in Main Table III, pp. 151-155. See also Statistical Notes, Coverage and Groups of Countries.

annually in 1991-1995, the latter half of the decade under report (Table 1). The straight-line segment in Figure 2, shows developed group spending dropping steadily at a rate of 7% since 1992 with no sign of impending deviation, although regional rates vary substantially, as will be seen.

In contrast, military spending by this group of countries (mainly in South and Central America, Africa, and Asia) experienced a sizable increase in 1995, to roughly \$200 billion, after having posted consecutive reductions

* The logarithmic or ratio scale used in these figures is designed to facilitate comparison of rates of change. Ratio scales are compressed as values increase so that, anywhere on the chart, equal vertical distances represent equal ratios of value and equal slopes represent equal rates of change.

**Figure 2. World Military Expenditures:
1985-1995**

since 1990. Spending by this group has fluctuated repeatedly and peaked earlier in a 1982-1986 plateau. It declined relatively slowly at under 2% over the decade and under 4% in the latter half, with a reversal at the time of the Gulf War.

This suggests that the post-Cold War downward adjustment among the developed group is still in progress and is independent of the decline in the developing group, where it may be drawing to a close or reversing direction.

Regional Trends

Although regional military spending continues to exhibit the predominantly downward tendency seen in recent years, the trends are becoming more diverse, as shown in Table 1 and Figure 3. Real spending growth rates in 1991-1995 for seven regions, including the largest, were still declining moderately to rapidly, while five had rising trends (in percent):

	1991-1995 Average Rate	World Share 1995
--	---------------------------	---------------------

Declining

Eastern Europe	-24.1	11.5
Middle East	-18.0	5.6
Central America & Carib.	-11.9	.1
Subsaharan Africa	-6.4	.4
Western Europe	-3.3	23.2
North America	-3.0	33.4
North Africa	-.6	.6

Rising

Central Asia & Cauc. (92-95)	+6.3	.4
South America	+5.2	2.7
South Asia	+3.6	1.5
Oceania	+3.4	1.1
East Asia	+3.3	19.1

The five largest regions in military spending—North America, Western Europe, East Asia, Eastern Europe, and the Middle East—accounted for 93% of the world total in 1995. (The regions are ranked in Table 1, second column.) Trends in Eastern Europe and the Middle East were sharply declining, in North America and Western Europe, modestly-to-moderately declining, and in East Asia, moderately rising. Eastern Europe lost its leading rank in 1991-1992 with Soviet reform and collapse.

North America's one-third share of world spending in 1995 was down from its 36% share in the previous year, as the region continued to follow a steady if moderate declining pattern begun in 1986, broken only in 1992 by the Gulf War. The United States (96% of the region) was by far the largest spender in the world, its \$278 billion in 1995 being 3.7 times that of second-ranked Russia. This was despite dropping by \$18 billion (constant dollars) or 6% in 1995 and by around 3% annually from 1985 and 1991. Over the decade, the United States' share of the world in military spending as well as in other military indicators has increased, even as its real levels declined, due to the fact that the rest of the world has been falling faster (see box below). Canada's over \$9 billion in 1995 gave it a relatively high 13th world spending rank despite being overshadowed by the United States (Figure 4).

Western Europe's spending, at \$200 billion now nearly a quarter of the world's, has also been falling moderately every year since 1990 at over 3% annually. In 1995, the largest spenders—France, Germany, the United Kingdom, and Italy, ranked 5th through 8th with outlays ranging from \$48 to \$19 billion—continued to fall, led by the United Kingdom's nearly \$3 billion drop. Most others also declined, the seven exceptions being Spain, Turkey, Portugal, Greece, Sweden, Ireland, and Switzerland. Over

* Average annual rate, calculated as a compound rate curve fitted to all points (see Statistical Notes for details).

the decade, Western Europe's 1.3% rate of decline has been lowest of all major declining regions, followed by North America, suggesting the possibility of further substantial drops yet to come.

East Asia continued its upward trend in 1995, increasing its total military expenditures by \$8 billion or 5%, to a decade high \$165 billion. The region has steadily increased its spending every year of the decade except for a slight drop in 1991, with an average 3.3% growth rate since then. China's \$5 billion jump can be credited for much of the region's increase in 1995. There were large increases in 1995 by numerous others as well, including Taiwan (\$1.4 billion), Indonesia (\$975 million), Singapore (\$585 million), and North Korea (\$362 million). Only Japan and the Philippines recorded sizable reductions, \$300 million and

Figure 3. Military Expenditures by Region: 1985-1995

\$251 million, respectively. China, at \$63 billion in military expenditures, was the third largest spender in the world in 1995, followed by Japan at fourth with \$50 billion. South Korea and Taiwan also were high in the world rankings, 10th and 11th, respectively.

Eastern Europe's roughly \$100 billion in military expenditures in 1995 marks the region's seventh consecutive drop since peaking at \$472 billion in 1988, an overall reduction of about four-fifths. The 1995 drop of \$20 billion can be credited mostly to Russia, down by \$19.3 billion. Russia's roughly estimated \$76 billion continues to dominate regional spending and puts it second in the world, followed by Poland, 24th with \$5 billion. The Ukraine posted

US Military: Changes in World Status and Trends

The United States position in the world's military picture has changed in divergent ways recently, depending on whether the comparison is over time or with the rest of the world. On the one hand, US military indicators fell substantially since peaking in 1986 to 1988, including in the most recent 5-year period, while general economic indicators rose (in %):

	1995 as % of previous peak (in 1986-1988)	Average growth rate 1991-95
Military expenditures	74	- 3.2
Armed forces	71	- 6.3
Military spending/GNP	60	- 5.6
Arms exports	69	- 1.9
Arms imports	29	- 17.4
GNP	—	+ 2.6
Population	—	+ 1.0
Total exports	—	+ 5.5
Total imports	—	+ 8.2

On the other hand, the US rank and share of the world rose over the decade in such key indicators as military expenditures and arms exports, where the US has become far and away the world's largest, and armed forces, where the US rose from third to second, even as its share dropped.

US as Percent of the World

	1985	1995		1985	1995
Military spending	27	32	GNP	23	23
Arms exports	26	49	Total exports	11	12
Arms imports	3	3	Total imports	18	16
Armed forces	8	7	Population	5	5

This rise in US military status has resulted mainly from sharp reductions in other parts of the world, due especially to the Soviet collapse and Cold War end, rather than US increases. Since US military indicators dropped more slowly than those of the rest of the world, relative US military stature rose.

Besides rising, US shares of the world for military indicators (except arms imports) are higher than for corresponding civilian or overall indicators, where shares have been stable. Whether this military advantage persists may depend on whether it derived mainly from a not-yet-dissipated Cold War momentum, domestic economic and political factors, or the US's leading role in international security affairs, as well as future demands on that role. (Data derived from Main Tables I and II; see also Figure 4 and the Country Rankings section, below.)

a large drop of \$900 million, and Hungary (\$272 million), the Czech Republic (\$190 million), and Belarus (\$172 million) also experienced sizable drops. On the other hand, sizable increases were recorded in 1995 by Romania (\$287 million), Croatia (\$241 million), Poland (\$127 million), and Slovakia (\$126 million). These followed rises in 1994 as well.

The largest single drop in Eastern Europe's spending came in 1992 with a sharp 36% decline. (Only about one percentage point of this drop was due to the definitional transfer of eight former republics of the Soviet Union from the region to the new *WMEAT* Central Asia and Caucasus region.)

Middle East military spending totalled \$49 billion in 1995, a slight decline from 1994 and about half of the 1991 peak during the Gulf War. Large drops were experienced by Iran, which fell by \$1.4 billion, Saudi Arabia, \$420 million, the United Arab Emirates, \$290 million, and Syria, \$156 million. Most other countries increased their spending. Egypt had the largest increase in 1995, up by \$772 million. Israel, with \$358 million, and Kuwait, \$342 million, also showed sizable rises. Saudi Arabia ranked 9th in the

world in 1995 with \$17 billion and Israel ranked 14th with \$9 billion.

While all five major spending regions except East Asia had falling trends in the latter half of the decade, the remaining smaller regions exhibited a more varied picture for that period. Four had rising trends—South America, South Asia, Oceania, and Central Asia and Caucasus (in 1992-1995), while three were falling—North Africa, Sub-Saharan Africa, and Central America and Caribbean. In 1995, several of these regions bucked their trends; South Asia and Oceania fell while North Africa rose.

Though trends in these smaller spending regions have little influence on the shares or movement of spending in the world and various other large groupings of countries, they are significant from the standpoint of arms control, nonproliferation, and regional stability. It is here, after all, that much conflict and war occurs, and such conflict or its potential provides incentive for the acquisition of ordinary conventional weapons and, ultimately, advanced conventional and mass destruction weapons. Most interstate conflicts involve individual countries in small sub-regions, of course, rather than large groups and regions.

Figure 4. Leading Military Spenders and Armed Forces: 1995

South America's relatively fast annual growth in military spending during the latter half of the decade is due mainly to a rise of \$4 billion in 1995, to a total of \$23 billion, marking an all-time decade high for the region. Much of the 1995 rise can be credited to Brazil's dramatic \$3.5 billion increase, along with Colombia's \$665 million, Chile's \$366 million, and Peru's \$121 million. Only Argentina and Venezuela experienced sizable drops from 1994, \$328 million and \$158 million, respectively. Brazil's \$11 billion in 1995 spending ranked 12th in the world.

South Asia's rising trend in 1991-1994 is attributable to India, which makes up about 60% of the region, and Pakistan, about 30%. Both Indian and Pakistani military expenditures fell in 1995, however, by \$671 and \$292 million, respectively. In terms of world rankings, India's \$8 billion in expenditures in 1995 places it 18th, while Pakistan, with roughly \$4 billion, ranks 30th.

Oceania's spending has been rising steadily and moderately since 1989, with a slight drop in 1995. Australia, which dominates the region, continued a relatively stable level of spending in 1994 and 1995 of around \$8.5 billion, ranking 16th in the world.

Other small regions have diverse trends. Spending in North Africa has been declining in most years of the decade until bottoming in 1993-1994 and rising in 1995, due to Libya's \$660 million upturn. Countries in Sub-Saharan Africa overall, as well as South Africa, have been dropping since 1993. Total spending in Central Asia and the Caucasus has levelled at around \$3.5 billion in 1993-1995. Central America and Caribbean spending has dropped rapidly in the last half of the decade, particularly in 1992 and 1995, led by reductions in Cuba, El Salvador, and Nicaragua, with upturns in Haiti and Dominican Republic in 1995.

Armed Forces

The world armed forces total of 22.8 million soldiers in 1995 represented a 3% drop from 1994 and a continuation of the downward trend following the 1988 decade high of 28.7 million (Main Table I). The worldwide trend was relatively flat over the first half of the decade but fell at a modest 3% annual rate in the second half.

Figure 5. World and Regional Armed Forces: 1985-1995

Total developing country forces fell only slightly, at an average rate of less than 1% over both periods. Now twice as large as the developed, they numbered 15.1 million in 1995, down 2.5% from 1994 (Figure 5).

The armed forces of the developed country group totaled 7.7 million in 1995, 4% less than in 1994. They continued to fall faster than those of the developing group, posting annual drop rates of 7% in 1991-1995 and 5% over the entire decade.

* Average annual rate, calculated as a compound rate curvefitted to all points (see Statistical Notes for details).

As a result of the differing trends, the forces of developing countries have grown from 57% of the world total in 1985 to two-thirds in 1995 (Table 2).

Thirteen of the world's twenty largest armies in 1995 belonged to developing countries (Figure 4 and Country Rankings). Of these, China, India, and North Korea had forces of over 1 million soldiers each in 1995 and ranked 1st, 4th and 5th in the world, respectively. The next three largest developing country armies—Turkey, Pakistan, and Vietnam—had armed forces totaling between roughly 550 and 800 thousand and ranked 6th, 8th and 9th. The Ukraine, Iran, Egypt, Iraq, Burma, Syria, and Thailand—with forces between roughly 300 and 500 thousand—rounded out the top twenty.

Among developed countries, armed forces of the United States and Russia ranked second and third in the world, respectively, roughly 1.5 million each. Together, the five armies of a million or more made up over a third of the world total in 1995.

Regional Trends

Nearly all regions followed at least mildly declining trends over the decade. Only South Asia had rising trends over the decade and its second half. East Asian armed forces, more than twice as large as the next region's, found their share of worldwide forces expanding to nearly a third. Eastern European and Central American forces dropped sharply, especially in 1990-1992. North America had the third fastest rate of decline in the last half-decade.

East Asia

East Asian armies made up 32% of all armed forces in 1995 compared to 30% in 1985. The dominant army—Mainland China's—had 2.9 million soldiers in 1995, 41% of East Asia's and 13% of the world's armed forces. The size of its 1995 army held constant from 1994, ending a downward trend that began in 1989. Over the decade, China's army fell on average by 3.5% and slightly slower at 2.5% during 1991-1995. China's army is roughly three times North Korea's, the next largest East Asian army with just over one million soldiers in 1995, down 13% from 1994. Over the decade, North Korea's army grew on the order of 3.4% annually, but fell during the latter half of the decade by 3% as a result of the drop in 1995. The next three largest armies in East Asia in 1995 were South Korea (655 thousand soldiers), Vietnam (550), and Taiwan (425). Of these, only Vietnam had rapid change, an annual decline of 9% over the decade and 12% over the latter half. The above five were among the 15 largest armies in the world in 1995, 1st, 5th, 7th, 9th, and 15th, respectively.

Western and Eastern Europe

Total European military strength fell to 6.3 million soldiers in 1995 following consecutive reductions during 1987-1993 and a slight increase in 1994. European armies dropped to 27.5% of world armed forces in 1995 compared to a 34% share in 1985. This dramatic shift is due mostly to Eastern Europe's fall from 20% of the world in 1985 to under 14% in 1995.

Turkey has the largest army in Western Europe with 805 thousand soldiers in 1995, down slightly from 1994. It accounts for over one quarter of Western Europe's armed forces. Over the decade, Turkey's armed forces trended downward slightly but rose during 1991-1995.

France, with 504 thousand soldiers, Italy, 435, and Germany, 352, maintained the next largest armies in Western Europe in 1995, together making up an additional 41% of total regional strength. Each of these three declined steadily over the mid-to-late portion of the decade, with Germany's being the most rapid (3.5% over the decade and 7% over the latter half). Turkey ranked 6th in the world in terms of total armed forces in 1995, followed by France at 10th, Italy at 13th, and Germany at 17th.

European members of NATO made up 64% of NATO's total strength in 1995, 48% of Europe's, 95% of the Western European, and 13% of the world's.

Eastern Europe's armed forces have been reduced by 45% from the beginning to the end of the decade, with the 1995 total being the lowest level, although the trend was nearly level in the last three years. Russia claims the largest army, with 1.4 million soldiers in 1995, 45% of the regional total. Ukraine has the second largest army with 476 thousand soldiers and 15%, followed by Poland (278 thousand) and Romania (209). Poland and Romania have experienced substantial growth in forces strength since 1993, Poland up by roughly 100,000 soldiers or 54%, and Romania up by 42,000 soldiers or 25%. Over the decade both had strong declining trends. Russia's forces declined during 1992-1995 at an annual rate of 9% while the Ukraine's grew at 2%. Russia ranked 3rd among the world's armed forces in 1995, the Ukraine, 11th, Poland, 23rd, and Romania, 28th.

Middle East

Armies of the Middle East accounted for 10% of world armed forces in 1995, totaling over 2.3 million soldiers. The region's total fell by 86,000 soldiers from 1994 to 1995, a 4% drop. A relatively mild 2% annual drop since 1991 comes after sharp increases in the first half of the decade with the Iran-Iraq and Gulf Wars, followed by a precipitous 25% fall in 1991 alone.

Iran (440 thousand), Egypt (430), and Iraq (390) continue to have the region's largest armies, making up over half of the 1995 regional total. The next three largest armies were Syria (320 thousand), Israel (185), and Jordan (112).

Iran and Iraq were the only Middle East countries to reduce their armies in 1995, Iran by 88 thousand soldiers or 17% and Iraq by 35 thousand or 8%. Increases were experienced by Jordan, 12 thousand soldiers, and Saudi Arabia, 11 thousand. The armies of Kuwait, Lebanon, and Oman increased their armies by 5 thousand soldiers, while all others remained at their 1994 manpower levels. Over the decade, Iran and Saudi Arabia grew annually on the order of 3% and 11%, respectively, while Iraq dropped at an average rate of 10%, mostly in 1991. Over the latter half of the decade all major armies of the Middle East had declining trends, the most rapid being Syria's, with a 7% rate.

In 1995 Iran maintained the 12th largest army in the world, followed by Egypt at 14th, Iraq at 16th and Syria at 19th. Far out of line with their significance, Israel's was the 30th largest and Jordan's, the 41st.

South Asia

South Asian armed forces totaled over 2.1 million soldiers in 1995, over 9% of the world total and 11 thousand less than the previous year, ending a period of moderate growth that began in 1989.

Indian and Pakistani armies make up 86% of the region's total strength, India alone accounting for almost three-fifths. India's armed forces fell by 40 thousand soldiers in 1995, returning its manpower to the 1993 level, while Pakistan's armed forces rose by 47 thousand, also returning to roughly their 1993 size. Both nations had slow growth during both the decade and half-decade periods. India continues to possess the 4th largest army in the world, with 1.265 million soldiers in 1995, while Pakistan had the 8th largest, with 587 thousand. Bangladesh's army, 115 thousand soldiers strong, was only the 38th largest.

North America

The United States dominates North American armed forces strength. The US armed forces level of over 1.6 million in 1995—the world's second largest army—is down roughly 100 thousand soldiers from 1994 and 659 thousand from its peak level in 1987. The 1995 US forces accounted for 87% of the North America region, 21% of the developed countries total, but only 5% of the world strength. Over the decade, US forces fell at an annual rate of 4%, but the decline quickened over the latter half of the decade, to 6%. Mexico, with 175 thousand soldiers, ranked 31st in the world in 1995 and Canada, with 70 thousand, ranked 56th.

Table 3
Force Ratio Trends

	Amount		Growth Rate*		
	1985	1991	1995	Decade 85-95	2nd Half 91-95

* Average annual rate, calculated as a compound rate curve fitted to all points (see Statistical Notes for details).

The remaining six developing regions of the world—North and Subsaharan Africa, South and Central America, Central Asia, and Oceania—accounted for 13% of the world's total armed forces in 1995, up by 1 percentage point from 1985. No countries in these regions possessed armies ranking in the top twenty in 1995, and only Brazil, with 285 thousand soldiers, and Morocco, with 195 thousand, rank in the top thirty.

Force Ratios

The ratio of a country's armed forces to its population provides a useful indicator of national military burden and effort. A comparison of trends in armed forces, population, and the resulting "force ratio" shows some significant differences between developed and developing countries and sharp differences among regions (Table 3; see also column 1 of Figure 18 on page 28).

The force ratio for the world declined at an accelerated 4.4% rate during the 1991-1995 period. In 1995 there were four soldiers per thousand people, compared with just under five in 1991 and nearly six in 1985. The force ratio of developed countries in 1995 was double that of the developing, 6.6 compared to 3.3. Force ratios of both groups have fallen moderately, the annual rate of decline for developed countries during both the decade and half-decade being more rapid than for developing countries.

In 1995, the Middle East had the highest force ratio of any region with 10.7 soldiers per thousand people, followed by Eastern and Western Europe with 9.1 and 7.1, respectively, North Africa with 5.9, North America with 4.8, and East Asia with 3.8. All remaining regions had lower force ratios.

North Korea continues to have the world's largest army relative to its population, with slightly over 44 soldiers per thousand (see Country Rankings). This ratio is down almost eight points from the 1994 rankings. Four other East Asian countries—Taiwan (20), Singapore (18), Brunei (17), and South Korea (15) were also leading countries in terms of this ratio, though only Taiwan ranked in the world's top ten.

Five of the top ten countries in terms of this measure were of the Middle East region. Israel ranked second in the world with 35 soldiers per thousand people, Jordan followed at third with 27, Syria and the United Arab Emirates, each with 21, placed 5th and 6th in the world ranking, and Iraq, with a ratio of 19, ranked 10th. Three other Middle East nations—Qatar (19 soldiers), Oman (17), and Lebanon (15)—also ranked in the top twenty.

Countries with large populations tend to have small force ratios, of course, even if they have large armies. China, for example, with the world's largest army, has a force ratio of 2.4, well below the modal value of 4.2, while India with the fourth largest armed forces has a ratio of 1.4.

Arms Transfers

Figure 6. The World Arms Trade: 1961-1995

The world arms trade rose by \$5.2 billion in 1995, the first significant turn from a steep 16%-per-year, 8-year decline which ended in 1994 below the 1972 level (Figure 6 and Main Table II). The 1995 total of \$32 billion brought the level back to only about two-fifths of the 1987 peak (in constant 1995 dollars), but the upturn suggests that the post-Cold War plunge in the arms trade may be bottoming out.

World arms sales agreements (as distinct from actual deliveries—that is, exports or imports) also declined generally over the decade from a 1985 peak of over \$73 billion to a \$32-34 billion level in 1992-1995, with the exception of a large \$52 billion Gulf-War-induced "spike" in 1993. (Agreements data are in current dollars from Main Table IV.) Agreement levels tend to be more erratic and less reliably estimated than deliveries and have been especially volatile for the United States during the latter years of the decade. US agreement levels also spiked in 1991 and 1993, the latter reaching \$37 billion before returning in 1995 to \$13 billion, well below the decade average and giving no indication of future growth. The 1995 upturn in world deliveries noted above may reflect the agreements surge resulting from the Gulf War, which will take years to realize.

Note:

- Total arms imports equal arms exports at the world level (only).
- Initial estimates of arms trade totals for the latest year are based on incomplete data and tend to rise when reestimated in subsequent editions.
- With the previous edition, the scope of US arms exports was expanded to include exports of military services under the FMS program (see Statistical Notes, Arms Transfers).

Arms Import Trends

The 1995 upturn in the world arms trade was the result of a sharp \$5.6 billion or 36% rise in the arms imports of developing countries, as developed country imports continued to fall, though only by \$.4 billion (Figure 7). Both groups of countries began their continuous decline from high points in the same year, 1987, but the rate of decline from then until the 1994 low point was much steep-

Figure 7. World Arms Imports: 1985-1995

er for the developing countries—a sharp 33% annually. Over the entire period, the developing countries had a faster average rate of fall despite the upturn in 1995 (Table 4).

The distribution of the world arms trade between developed and developing countries moved towards an increasingly large share for the developed—from 29% in 1985 to near equality, 45% in 1993, but then returned to a more traditional 33% in 1995.

Overview of Regions

Although all regions of the world had declining arms import trends over the entire period from 1985 to 1995, the three largest importing regions—the Middle East, East Asia, and Western Europe—declined more slowly than the rest and their leading positions rose, their combined share of world imports going from 60% to 76% (Table 4). Their individual shares also rose, the Middle East reaching a relative peak of 43%, and East Asia nearly doubling its share from 12 to 20%. Western Europe at 13% in 1995 was more than three times the next region. Eastern Europe had been a close fourth in regional rankings in 1985 but dropped to eighth by 1995 and was replaced by South America, which rose to 4% with a spurt in 1995 after being one of the smallest importing regions in 1985 at 2%.

Table 4
World Arms Imports: Shares and Growth
(in percent)

	World Share		Real Growth Rate*	
	1985	1995	Decade 85-95	2nd Half 91-95

CIS —	1.1	—	—	—

* Average annual rate, calculated as a compound rate curve fitted to all points (see Statistical Notes for details).

Of the 12 regions, seven raised their imports in 1995, but the Middle East alone accounted for over two-thirds of the 1995 world increase. For the Middle East, South America, and South Asia, 1995 was the first year of upturn after several year declines; for East Asia and North Africa, an upturn began in 1994.

Four regions continued their downward trend in 1995—Western Europe, North America, Subsaharan Africa, and Central America. Western Europe had been declining since 1989, North America, since 1988, and at similar rates since 1991 of 13% and 17%, respectively. Subsaharan Africa dropped sharply in 1995, resuming a decline that began in 1986 but was interrupted by spikes in 1987-1988 and 1994.

Figure 8. Regional Arms Imports: 1985-1995

Figure 9. Regional Shares of the World Arms Import Market: 1985 and 1995

Central Asia continued a climb from virtually no trade in 1992. Since year-to-year fluctuations in the arms trade can be large, the world market shares over the cumulative 1993-1995 period are also informative; in this case a generally similar picture emerges (in millions of current dollars—based on Main Table III):

Middle East	\$36,940	42%
East Asia	15,895	18
Western Europe	13,270	15
North America	4,440	5
Africa, all	3,350	4
South Asia	2,660	3
Eastern Europe	2,470	3
South America	2,230	2
All others	7,660	8
World	88,915	100

Middle East

The Middle East remains by far the largest regional arms import market with \$13.8 billion in purchases in 1995. Its 1995 world share of 43% is five percentage points higher than the 38% share recorded in both 1994 and 1985. The region declined by an average 10% annually over the decade, but at a much slower 4% during 1991-1995, which can be credited mostly to a roughly 35% jump in 1995. Overall, the 1995 total is roughly half of that recorded during the earlier part of the decade.

In a sharp contrast to deliveries, arms purchase agreements by Middle East countries fell to a decade low of \$5.6 billion in 1995, less than half the total recorded in 1994 and one quarter of 1993's. These changes are mainly attributable to the dramatic spike in US agreements with the Middle East in 1993 amounting to over \$16 billion, which then fell sharply in 1994 and 1995. French arms agreements with the Middle East also brought about large shifts, rising from \$100 million in 1992 to \$3.6 billion in 1993, to \$6.6 billion in 1994, and then falling to \$1.9 billion in 1995. Over the period 1993-1995, the US accounted for 58% of all arms agreements with the Middle East, and France, for another 30%.

During the latter part of the decade trends among Middle East countries varied widely as evidenced by the high growth rates (in %) of Oman (112), Yemen (85), Lebanon (75), the United Arab Emirates (19), Egypt (16), Jordan (8), and Kuwait (5) and by the rapidly declining trends of Syria (52) and Iran (37).

Other nations showed dramatic shifts in imports, including Saudi Arabia, which had posted consecutive reductions in imports since 1991 (from a lofty \$9.3 billion to \$6.6 billion in 1994) but rose to \$8.6 billion in 1995. Egypt fell from \$1.5 billion in 1993 to \$1.2 billion in 1994 and then rose to \$1.9 billion in 1995. Kuwait fell from a decade high of

Figure 10. Middle East Arms Import Market: 1995

over \$1 billion in 1992 to \$226 million in 1994 and rose to \$900 million in 1995.

Israeli imports also fell from over \$1 billion in 1993 to \$615 million in 1994 and \$340 million in 1995. Israeli imports have declined by an average 15% since 1991. Iranian imports totaled \$270 million in 1995, marking a second consecutive drop from the over \$1 billion in purchases recorded in 1993. In contrast to Iran and Israel, Jordan and Oman posted consecutive increases since 1992, Jordan from \$22 million in 1992 to \$70 million in 1995 and Oman from \$11 million to \$460 million.

The largest arms importers in the Middle East during 1993-1995 were the following (in millions of current dollars; Main Table III):

Saudi Arabia	\$22,555	61.0%
Egypt	4,495	12.2
Israel	2,060	5.6
Kuwait	2,055	5.6
Iran	1,780	4.8
United Arab Emir.	1,735	4.7
Others (9)	2,260	6.1

The six leading countries together accounted for 94% of the \$37 billion worth of weapons and military equipment imported into the region during this period.

Saudi Arabia continues to dominate the Middle East region and the world in terms of arms imports. Its 1995 import volume of \$8.6 billion accounted for over 62% of the

regional total and 27% of the world. It was 4.5 times that of the next largest regional and world importer, Egypt, whose \$1.9 billion accounted for 14% of the regional total and 6% of the world total (Figure 12; Country Rankings). These two nations accounted for a combined 76% of all arms imported into the region and 33% of the world total.

Other leading arms purchasers during this period were Kuwait and the United Arab Emirates, each accounting for roughly 6% of the regional market and 3% of the world market. The remaining eleven countries combined accounted for 11% of all regional arms purchases during 1995 and 5% of the world total. In terms of rankings, Kuwait followed the world leaders Saudi Arabia and Egypt as the eighth largest arms importer in the world during 1995, the United Arab Emirates ranked ninth, Oman ranked 17th, Israel ranked 21st, and Iran ranked 27th.

The United States, the number one arms supplier to the Middle East, provided \$18.4 billion in weaponry to the region during 1993-1995, roughly half of the region's total and 43% of total US sales (Main Table III). The United States' largest trade partners in the region were Saudi Arabia (\$10.1 billion), Egypt (\$4.1 billion), Israel (\$1.7 billion), and Kuwait (\$1.6 billion). The United Kingdom was the second largest supplier to the region in this period with \$11.4 billion, which accounted for 31% of the region's total imports and 77% of total UK sales. Saudi Arabia was the key recipient, consuming 90% of total UK sales to the region and 69% of its worldwide sales. The arms supplied to the region by these two exporters accounted for 81% of regional purchases, 52% of their combined worldwide sales, and 34% of world trade. France (\$2 billion) and Russia (\$1.7 billion) were also major suppliers, accounting for a combined 10% of regional imports. The key recipients in this case were Saudi Arabia, with \$1.4 billion in purchases from France, and Iran, with \$1 billion from Russia.

East Asia

East Asia remains the second largest regional arms import market for the second year. Its \$6.4 billion in 1995 purchases were 20% of the world total, eight percentage points more than the 12% share recorded in 1985. The 1995 total marks the second straight rise for the region after having fallen continuously from a peak of \$10 billion in 1987 to less than half that amount in 1993, \$4.3 billion. Increases in both 1994 and 1995 put East Asian arms imports up 50% from 1993. The region averaged a 6% annual decline during the entire decade, but grew on the order of 2.4% annually over the latter part of the decade, reaching 65% of the 1987 record peak.

In 1995, the region's leading arms importers were Taiwan with \$1.2 billion and South Korea and Thailand with \$1.1 billion each. These were followed by another trio,

Figure 11. East Asian Arms Import Market 1995

Malaysia, China, and Japan, with \$750-625 million. Together these six accounted for 86% of East Asian imports in 1995.

The same sextet also accounted for about the same portion of the nearly \$16 billion imported during 1993-1995, as shown below in a listing of major importers over that period (in millions of current dollars; Main Table III):

South Korea	\$3,505	22.1%
Taiwan	3,215	20.2
Japan	1,960	12.3
Malaysia	1,920	12.1
China	1,610	10.1
Thailand	1,575	9.9
Singapore	560	3.5
Indonesia	300	1.9
Vietnam	295	1.9
Others (7)	955	6.0

In terms of their arms import trends over the entire decade, the countries of the region have followed several general paths. Relatively steady trends (in constant dollars), with decade-long average annual change rates, up or down, of 5% or less have been followed by most of the largest importers and some intermediate-sized importers, including Taiwan, South Korea, China, Thailand, Singapore, and the Philippines. Several large importers at the beginning of the decade fell drastically in the 1990-1993 interval, including Vietnam, North Korea, Indonesia, and Cambodia, with a moderate recovery in the 1994-1995 period (except Cambodia). Japan's imports have declined at an 8% rate over the decade and somewhat faster (17%) in the latter half.

Figure 12. Leading Arms Importers and Their Major Suppliers: 1993-1995

Malaysia began the decade at a high level, dropped to a plateau, then began an upturn that averaged 73% per year in 1991-1995.

As a consequence of these patterns, arms imports in East Asia have been spread more widely than in the Middle East. At various points in the decade, five different countries have been the region's largest importers (Vietnam, Japan, China, South Korea, and Taiwan). In 1995, East Asia's six leading importers all had high world ranks in terms of arms imports—Taiwan (3), South Korea (4), Thailand (5), Malaysia (11), China (12), and Japan (15).

For several East Asian countries in 1995, even though their arms imports have dropped to relatively moderate levels, the ratio of arms to total imports was sizable, due to low total imports (Main Table II):

	Arms imports (million \$)	Arms as % of total imports
Burma	\$140	10.5%
North Korea	100	5.8
Cambodia	20	3.2
Vietnam	200	2.7
Region average	—	0.6

The United States is the number one supplier to East Asia, providing over \$8 billion in weaponry to the region during 1993-1995, roughly half of the region's total arms imports. The United States' largest trade partners in the region were Taiwan (\$3.2 billion), Japan (\$1.9 billion), South Korea (\$1.4 billion), and Thailand (\$1.1 billion). Russia was the second largest supplier during this period, providing some \$2.2 billion or 14% of the region's total imports. China was the recipient of over half of these sales, followed by Malaysia (\$550 million) and Vietnam (\$290 million). During this period, the combined sales to the region by these two exporters accounted for 65% of regional purchases and almost one-fifth of their combined worldwide sales. The United Kingdom and Germany, both with roughly \$1.7 billion in sales to East Asia during 1993-1995, accounted for a combined 21% of the regional arms imports. Key recipients from these suppliers were Malaysia, with \$1.2 billion from the United Kingdom, and South Korea, with \$1.5 billion from Germany.

Data on agreements, in contrast to the delivery data discussed above, suggest further increases in the future. Arms purchase agreements by East Asian countries rose from \$6.6 billion in 1994 to \$8.8 billion in 1995, which can be attributed mainly to Russian agreements, which rose sharply to \$4.7 billion from \$2 billion in 1994. US arms agreements

with East Asia peaked at \$9.6 billion in 1993 but fell to roughly one-third of that amount in 1994 and fell further to \$2.5 billion in 1995. This accounted for 28% of total regional arms agreements, while Russian sales made up 53%.

Trends within Europe

Western Europe, with imports totaling over \$4 billion in 1995 and \$13.3 billion during 1993-1995, is the third largest arms importing region. Western Europe overshadowed the Eastern half in 1995 by importing 13% of total worldwide imports and 83% of imports by Europe as a whole. The 1995 reduction of 7% in Western Europe's arms imports continued a consecutive yearly decline since the peak of \$11.4 billion in 1989. Eastern Europe has experienced sporadic ups and downs in imports during this period, dropping steadily from \$9 billion in 1986 to a mere \$38 million in 1992, back up to \$1.4 billion in 1993, down to \$272 million in 1994, then up to \$835 million in 1995. Europe as a whole averaged a 13% annual decline during the entire decade and a 10% annual decline during the latter half. The Western half declined at a more rapid 13% during the later half of the decade and at a slower 7% over the 1985-1995 period. Eastern Europe conversely reduced its imports by 31% annually over the decade, but grew rapidly at 53% during 1991-1995.

Among Western European countries, only Austria (6%), Greece (6%), and Portugal (2%) had growing arms imports over the decade, while Spain (29%), Austria (18%), Greece (18%), and Belgium (1%) showed growth during the latter half. Most of those with declining trends had much more rapid reductions during the latter half of the decade. Over the entire decade, nine Western European countries declined between 5-10% annually, five between 10-20%, and one over 20%. This differs sharply with the latter half of the decade when only one country had annual declines between 5-10%, four, between 10-20%, and eight, over 20%. Several nations with previously high arms imports reduced them dramatically over the latter part of the period, notably Switzerland and Germany.

Western Europe's four leading arms importers—Turkey (\$3 billion), Greece (\$2.2 billion), Spain (\$1.6 billion), and Germany (\$1.3 billion)—together accounted for 61% of the \$13.3 billion worth of weapons and military equipment imported into the region during 1993-1995. In 1995 alone, the region's leading importers were Greece (\$825 million, 10th in the world and one-fifth of regional imports), Turkey (\$700 million, 13th), Spain (\$675 million, 14th), Belgium (\$340 million, 20th), and Germany (\$310 million, 22nd). These nations accounted for a combined 71% of all arms imported into Western Europe during 1995.

The United States is the number one supplier to Western Europe, providing roughly \$9 billion in weaponry to the region during 1993-1995, two-thirds of the regional total. The United States' largest trade partners in the region were Turkey (\$2.3 billion), Spain (\$1.3 billion), Greece (\$1.2 billion), and Germany (\$1 billion). Germany and France—the next largest suppliers during this period—each exported some \$1.1 billion in arms to others in the region, accounting for 17% of the region's total. Big purchasers from Germany included Greece (\$525 million) and Sweden (\$280 million), while Belgium (\$280 million) purchased a large share of French intra-regional sales. The UK's intra-regional sales totaled a much smaller \$325 million during 1993-1995.

Eastern Europe imported some \$2.5 billion in arms during 1993-1995, with most imports going to Hungary (\$950 million or 38% of its regional total) and Slovakia (\$550 million, 22%). The largest supplier of arms was Russia, which provided over \$1.3 billion during this period, the whole amount imported by these two leading recipients.

Other Regional Trends

The nine other regions of the world accounted for one-fifth of total worldwide arms sales in 1995, compared to two-fifths in 1985. This downward shift can be credited mostly to reduced arms imports by Africa (nearly 8 percentage points lower in 1995 than in 1985) and South Asia (4 percentage points lower). By contrast, South and North America and Oceania each increased their share of the market over the decade.

South America's sharp rise in arms imports from \$472 million in 1994 to \$1.3 billion in 1995 made it the fourth largest importing region with slightly over 4% of the worldwide market. This jump can be credited to big increases in purchases by a handful of countries, mainly Chile (up by \$267 million), Peru (\$218 million), Ecuador (\$209 million), and Brazil (\$67 million). Of the other South American arms purchasers, five had small increases in 1995 and only one had a decline.

Overall, regional imports grew at a rate of nearly 7% a year in 1991-1995. Ecuador (72%), Chile (42%), Argentina (29%), and Peru (29%) had much higher growth during this period. Argentina's arms imports remained relatively low compared to the high mid-to-late 1980's purchases, as did Colombia's, following a surge of imports during 1988-1992.

Over the 1993-1995 period, the key arms importers were Chile (\$525 million), Brazil (\$430 million), Peru (\$375 million), and Ecuador (\$370 million), consuming well over

three-fourths of the \$2.2 billion in regional purchases. The United States was the largest supplier of arms during this period, providing 17% of the total, while nations of the Middle East contributed an additional 17%.

North America, the fifth largest importing region, accounted for slightly under 4% of the worldwide market in 1995. The United States, Canada, and Mexico each reduced their level of imports in 1995, and all three had moderate annual rates of decline over the latter half of the decade. The United States dominated this market in 1995 and 1993-1995, accounting for 81% of imports in both cases. The United Kingdom was the top supplier of arms to North America, with \$1.2 billion in sales, all going to the United States. The United States ranked sixth in terms of worldwide arms imports in 1995.

Pakistan and India continued to dominate South Asia in terms of arms purchases in 1995, accounting for roughly four-fifths of regional imports. Both increased their imports from 1994, Pakistan from \$297 million to \$480 million and India from \$236 million to \$410 million, or by 62% and 74%, respectively. Over the decade and half-decade periods, India's imports declined at substantial rates, around 26%, while Pakistani purchases declined slightly by 3% a year over the decade but rose over the latter half at a 9% rate. Sri Lankan imports continued to climb rapidly, rising to \$160 million in 1995 (at an annual rate of 60% since 1991).

China and Russia continued to be the primary suppliers of arms to South Asia, providing 32% and 28%, respectively, of the \$2.7 billion in imports during 1993-1995. Most of China's sales went to Pakistan (\$625 million), while most of Russia's went to India (\$675). France was also a big supplier during this period with \$430 million in sales, all going to Pakistan. South Asia's leading arms importers were close in world rank, Pakistan at 16th and India at 18th.

In the remaining regions, Australia increased its arms purchases considerably in 1995 from \$410 million to \$900 million and accounted for 94% of Oceania's regional imports in both 1995 and the 1993-1995 period. Australia's imports grew at an annual rate of 9% during 1991-1995 compared to a 9% decline over the entire decade. The United States (\$1.1 billion) and Germany (\$500 million) supplied Oceania with most of its weapons, most going to Australia. Australia ranked seventh in worldwide arms imports.

In Central Asia, Kazakstan's \$280 million accounted for four-fifths of the region's 1995 arms imports. It also dominated the market over the 1993-1995 period, claiming \$360 million of the \$535 million in total imports. Of all arms imported into Central Asia during 1993-1995, 83% came from Russia and an additional 13% came from other Eastern European countries.

Algeria (\$395 million) and Morocco (\$235 million) imported 85% of the total arms purchased by North Africa

during 1993-1995. Algerian arms imports have risen consecutively since falling sharply to \$5 million in 1992. Morocco continues to be a sporadic arms importer.

Angola (\$1.1 billion) and Sudan (\$260 million) led the Sub-Saharan Africa arms import market during 1993-1995 and continue to be sporadic arms importers. South Africa imported an additional \$800 million in arms during the 1993-1995 period and continues to be a stable importer of relatively large amounts of arms into the region.

The combined imports of Cuba and El Salvador in the amount of \$100 million each accounted for two-thirds of the Central American and Caribbean arms market during 1993-1995, although Cuba imported zero arms in 1995 and El Salvador's purchases have dropped steadily since 1992. Russia and the United States are the key suppliers to Cuba and El Salvador, respectively.

Arms Export Trends

At the world level, totals for arms exports and arms imports are opposite sides of the coin and behave identically, with matching drops in volume and annual rates of decline. Thus, as with total imports, total exports were \$32 billion in 1995, an increase of \$5.6 billion or 20% from the previous year, after falling steeply by over 60% from their 1987 high point to the 1994 low. As with world imports, totals for the latest years are likely to be revised upward in future editions.

Figure 12. World Arms Exports: 1985-1995

**Figure 13. Arms Exports by Region:
1985-1995**

The 1995 upturn can be credited mostly to the developed country grouping, here considered as arms exporters rather than importers (and redefined in the *WMEAT 1995* edition; see Statistical Notes, Coverage. . .). Developed countries' arms sales, 94% of the total, increased \$5.2 billion in 1995, up 21% from 1994. Developing countries exports, 6% of the world's, increased as well in 1995, but only by about \$100 million, an increase of 5%. Arms exports by developed countries were 55% less in 1995 than in 1985, while those of developing countries fell by 61%. Over the decade arms exports fell by an annual rate of 11% for developed countries and 13% for developing, while over the latter half of the

* Average annual rate, calculated as a compound rate curve fitted to all points (see Statistical Notes for details).

decade the rates of decline were 5.5% and 6%, respectively (Table 5 and Figure 12).

Most of the significant arms exporting regions increased their exports in 1995 slightly to substantially—including North America, Western Europe, Eastern Europe, and the Middle East. Since their peaks in 1987-1989, these regions' exports had fallen sharply to 1992, after which fluctuating but generally level trends set in. The exception was East Asia, whose arms export level continued its falling trend almost every year, including 1995. Also uncharacteristic was the Middle East, whose level rose steadily from 1992 (Figure 13). By 1995 the world share of other regions had declined,

Figure 14. World Arms Exports Shares: 1993-1995

particularly South America's and North Africa's, to .2% or less (Table 5).

The top five suppliers of arms in 1995—United States, United Kingdom, Russia, France and Germany—each sold over \$1 billion in weaponry, the five combined totaling over \$27 billion or 86% of the worldwide market. Weapons exports by the US amounted to \$15.6 billion, three times that of the next largest supplier, the United Kingdom (\$5.2 billion). The next five largest arms exporters after the top five—Israel, China, Sweden, Iran, and Canada—totaled \$2.3 billion in 1995, 7% of worldwide sales.

Less subject to annual fluctuations are the shares of the world arms export market in the 1993-1995 period held by major exporters and groups (Figure 14). Besides US and UK preeminence and the diminished Russian share, the low French and non-European shares are noteworthy. The figure is based on Main Table III, which also shows sales of major suppliers to recipient countries in that period.

The shifting annual world market shares of the major exporters over the 1985-1995 decade are shown in Table 6, where it may be seen that US ascendancy coincided with the decline of the Soviet Union/Russia. Notable also is the steady growth of the UK share over the decade.

Table 6
Share of World Arms Exports: 1985-1995
(in percent)

	SU					Other			
	US	Russ.	UK	Fran.	Germ.	NATO	China	Isr.	Other
1985	26	32	3	13	3	7	1	1	14
1986	22	40	7	8	3	5	2	1	12
1987	27	37	8	5	2	5	3	1	12
1988	23	37	8	3	3	6	5	1	14
1989	29	35	9	4	2	3	5	2	11
1990	30	31	10	11	3	4	4	1	6
1991	40	17	14	6	7	4	4	2	6
1992	45	9	16	6	3	7	4	2	8
1993	49	10	15	4	5	4	4	2	7
1994	46	6	19	6	5	5	3	3	7
1995	49	10	16	7	4	3	2	2	7

In 1995 there were a total of 50 nations (three fewer than 1994's total) exporting arms to 98 recipients (one fewer than in 1994; see Country Rankings section). Of all developed nations, only six—Austria, Finland, Greece, Iceland, Ireland, and Luxembourg—had zero arms exports. Of the ten largest arms suppliers in 1995, China (\$625 million) and Iran (\$290 million) were the only developing nations. The next largest developing arms exporters were Eastern European countries Belarus (\$170 million), the Ukraine (\$160 million), and Bulgaria (\$150 million), ranking 12th, 13th, and 14th, respectively, in the world in 1995. There were 19 other developing arms exporters in 1995, all selling less than \$70 million in weapons.

United States

The United States dominates the arms export market with nearly half of the world total. US sales increased 28% from \$12.2 billion in 1994 to \$15.6 billion in 1995. Over the decade, US sales took a slow 3% annual decline and an even slower 2% decline over the last five years. The US share of North American sales, which has historically been 95%, rose to 98% in 1995. Canada, a relatively small exporter compared to the US, nevertheless was the 10th largest in 1995 with \$280 million.

During 1993-1995, the United States exported equal amounts of arms to developed and developing countries, \$21 billion each. It exported \$12.4 billion to OPEC countries and another \$9 billion to NATO countries. The US's largest recipient region was the Middle East, followed by Western Europe and East Asia. US arms exports by region in 1993-1995 are shown below (in millions of current dollars):

Figure 15. Leading Arms Exporters and Their Major Recipients: 1993-1995

Middle East	\$18,415	43%
Western Europe	8,885	21
East Asia	8,130	19
Oceania	1,140	3
North America	490	1
Africa, All	370	1
South America	370	1
All Others	4,975	11

US weapons exports to the Middle East in 1993-1995 went primarily to four major recipients—Saudi Arabia (\$10 billion), Egypt (\$4 billion), Israel (\$1.7 billion), and Kuwait (\$1.6 billion), which made up 95% of US sales to the Middle East and 41% of total US sales. Western Europe's leading recipients were Turkey (\$2.3 billion), Spain (\$1.3 billion), Greece (\$1.2 billion), and Germany (\$1 billion), accounting for a combined 65% of US arms to the region and 14% of total US sales. East Asia's leaders—Taiwan (\$3.2 billion), Japan (\$1.9 billion), South Korea (\$1.4 billion), and Thailand (\$1.1 billion)—took 93% of US sales to the region and 18% of total US exports.

Table 7
US Share of Recipient Regions' Arms Imports:
1993-1995 (in percent)

South Asia	4	2
Western Europe	67	71
Eastern Europe	1	—
Oceania	52	82

Figure 16. Leading Arms Exporters by Country and Year: 1985-1995

Oceania imported \$1.1 billion in arms from the United States during 1993-1995, almost all going to Australia. Central America purchased \$180 million in arms from the US, with over half of this amount going to El Salvador. The remaining regions—Africa (\$370 million), South America (\$370 million), South Asia (\$115 million), and Eastern Europe (\$30 million)—purchased relatively smaller amounts of arms from the US.

Shown in Table 7 is the US share of total regional arms imports, also cumulative for 1993-1995, by deliveries and agreements (Main Table III and Main Table IV). The US continues to account for high shares of agreements with developed countries and particular regions, notably Oceania, Western Europe, East Asia, and the Middle East.

Western Europe

Western Europe was the second largest arms exporting region in 1995 with \$9.4 billion in sales or 30% of the world total, almost five percentage points higher than in 1985. This was the second consecutive year of small rises since regional

exports reached a decade low of slightly under \$9 billion in 1993. Compared to the United States, Western European arms sales declined at slightly faster rates over the decade (7%) and over the half decade (5%). Western Europe's lead over the Eastern half continued to grow, with 70% of European arms exports in 1995 compared to 61% in 1991, 45% in 1990, and 38% in 1985.

The three major Western European arms exporters—the United Kingdom, France, and Germany—dominated the region in 1995 with a combined 89% of Western European sales and 30% of world sales. Over the period 1993-1995, these three totaled \$24 billion, 27% of the world total. In terms of the distribution of exports to developed and developing countries, the United Kingdom had the largest share of its cumulative 1993-1995 sales going to developing countries, primarily OPEC members:

	Total sales (billions)	To Dvlpng (%)	To OPEC (%)
United Kingdom	\$15.0	87	73
France	4.8	66	41
Germany	4.3	12	5

Table 8
European Arms Export Shares
(in percent)

	1985	1991	1993	1994	1995
<i>Share of World Arms Exports</i>

Eastern Europe	41	19	11	8	13
Western Europe	26	31	28	35	30
<i>Share of Western Europe Arms Exports</i>					
France	52	19	13	16	23
Germany	10	22	20	15	12
United Kingdom	12	45	54	55	54
Other NATO Europe	21	6	11	10	7
<i>Share of Eastern Europe Arms Exports</i>					
USSR/Russia	77	90	88	69	80

These countries also differed in the percentage of their total arms exports going to other NATO members (UK, 9; France, 22; Germany, 24) and to other Western European countries (UK, 14; France, 10; Germany, 13).

The United Kingdom's weapons exports of \$5.2 billion in 1995 ranked second in the world and made up 54% of Western European sales and 16% of world sales. The UK is the only major supplier with a growing trend in sales over the decade (3% annually) and has been virtually level over the last half-decade. During 1993-1995, the United Kingdom exported \$11.4 billion (77%) of its arms to the Middle East, with 90% of this amount going to Saudi Arabia. Oman imported \$725 million in arms from the United Kingdom during this same period. East Asia was the United Kingdom's second largest recipient region with almost \$1.7 billion in purchases (11% of total), followed by North America, with \$1.2 billion (8%), all by the United States.

France exported \$2.2 billion in weapons in 1995, an increase of \$662 million from 1994 and the second consecutive rise since reaching a decade low of \$1.1 billion in 1993. France ranked fourth in the world in 1995 and accounted for 23% of Western European and 7% of world exports. Over the decade, France's arms sales declined at an annual rate of 14%, but more slowly (3%) during the latter half. During 1993-1995, the French exported \$2 billion (42%) of their arms to the Middle East, with Saudi Arabia, also a key French recipient, consuming 70% of sales to the region and 29% of total sales. Arms exports amounting to well over \$1 billion to others within Western Europe made that region the second largest recipient, consuming 23% of the French total.

North America purchased \$430 million from France during 1993-1995, while Africa purchased \$360 million, with \$130 million going to South Africa.

Germany's \$1.2 billion in exports in 1995 was \$235 million less than in 1994 and marked a second consecutive fall. German sales in 1995 were 55% lower than in 1991, the decade's peak year. Germany ranked fifth in the world in 1995 and accounted for 12% of total Western European and 4% of world sales. Over the decade, German arms sales declined at a 4% annual rate and at a more rapid 12% during the latter half. During 1993-1995, Germany exported 38% (\$1.6 billion) of its arms to East Asia (mostly South Korea), 27% (\$1.1 billion) to others in Western Europe, and 11% (\$500 million) to Oceania (all going to Australia).

Other notable Western European arms exporters in 1995 include Sweden, ranked 8th in the world with \$310 million; Netherlands, 11th with \$230 million; and Italy and Belgium, 15th and 16th with \$150 million and \$130 million respectively. Only the Netherlands, Turkey, and Spain showed growth during the latter half of the decade.

Russia

Russian arms exports in 1995, at \$3.3 billion, showed little sign of revival from the extreme lows of \$2.5 billion in 1992 and \$1.5 billion in 1994, following the Soviet collapse. Nevertheless, in the diminished post-Soviet market, Russia ranked third in arms deliveries in 1995, after the US and the UK, with 10% of world exports and 81% of Eastern European exports. Russia's arms agreements, however, show a continuous rise to the \$9 billion level in 1995 from a low of under \$2 billion in 1992 and indicate probable future increases in exports (Main Table IV).

Over the 1993-1995 period, Russia's nearly \$8 billion in cumulative exports were distributed to regional importers as follows (in millions of current dollars; Main Table III):

East Asia	\$2,235	28%
Middle East	1,715	22
Eastern Europe	1,315	16
Africa, All	795	10
South Asia	740	9
Central Asia	445	6
Western Europe	385	5
All Others	295	4
World	7,925	100

These data show that Russia's arms exports were fairly widespread among regions, more so than other suppliers', and with several key recipients in most regions.

The main recipients in these Russian regional markets in 1993-1995 were as follows (in millions):

East Asia:		Africa:	
China	\$1,200	Angola	\$525
Malaysia	550	Algeria	260
Vietnam	290		
North Korea	170	South Asia:	
		India	675
Middle East:		Central Asia:	
Iran	1,000	Kazakstan	360
U.A.R.	280		
Kuwait	240		
Syria	120	Western Europe:	
		Turkey	350
Eastern Europe:			
Hungary	825		
Slovakia	470		

Future deliveries are likely to follow the rise in agreements in 1995 cited above, which were mainly in East Asia and Central Asia and Caucasus.

Arms Suppliers and Developing Country Imports

Major shifts have taken place in the suppliers of arms to the developing countries as a group. Table 9 shows that the major suppliers have differed considerably in the typical share of their exports going to developing countries, and changes in this pattern have occurred over the decade. In the case of Russia or the Soviet Union, the United Kingdom, France, and China, the predominant share of their arms exports—from three-quarters to nearly 100 percent—have gone to developing countries. For the UK, the share has increased over the decade, while for France, it decreased. In the case of the United States and Israel, this share has averaged just under half for the decade as a whole, although it

reached that mark in 1995. Germany and Canada on average have been considerably less oriented toward the developing countries and, along with other Western European suppliers, have become less so over the decade.

The share of each of these major suppliers in the total arms imports of developing countries as a group, shown in Table 10, has also shifted over the decade, with the United States replacing the Soviet Union/Russia as the largest supplier, the United Kingdom rising to second place, and France dropping from second to fourth.

Developing Country Exporters

Developing countries exported roughly \$1.9 billion in arms in 1995, up by \$1 billion from 1994 and marking an end to consecutive reductions in total sales since peaking at roughly \$8.3 billion in 1988. The group's share of world exports in 1995 was 6%. Over the decade, developing country arms exports dropped annually by an average 13%, but the rate of decline was considerably slower during the latter half, 6%. Only a handful of countries play significant roles in exporting weapons as indicated by 1995 totals. China is by far the most important supplier, with \$625 million in sales in 1995, followed by Iran, with \$290 million, and Eastern European nations Belarus (\$170 million), Ukraine (\$160 million), and Bulgaria (\$150 million). All other developing arms exporters sold less than \$100 million in 1995.

China's total arms exports in 1995 fell by \$118 million, marking its seventh consecutive drop since peaking at over \$3.7 billion in 1988. Over the decade, Chinese arms exports fell annually by 9%, and at a much faster 20% during 1991-1995. China was the world's seventh leading arms exporter in 1995, down three places from the 1994 ranking. China exported some \$2.5 billion in weaponry during 1993-

Table 9

1995	41	13	22	7	1	2	3	2
1985-95	21	37	12	8	2	4	5	1

1995, about 3% of total world sales. Of these sales, 93% went to developing countries and a considerable amount (\$590 million or 25% of China's total sales to developing countries) went to OPEC countries. China's main recipients during 1993-1995 were Pakistan (\$625 million), Iran (\$490 million), Burma (\$310 million), and Sri Lanka (\$210 million), the four combined accounting for two-thirds of China's total arms sales.

Eastern European countries can be credited with much of the developing country group's billion dollar rise in 1995. Belarus exports amounted to \$170 million in 1995 (from zero sales during the first three years of its existence), Bulgaria's total arms sales rose by \$88 million, and the Ukraine's rose by \$68 million. Iran also experienced a sizable increase in arms sales in 1995, from \$82 million in 1994 to \$210 million in 1995. In terms of world ranking, these nations ranked 12th, 14th, 13th, and 9th, respectively.

Number of Weapons Delivered

Another measure of the arms trade besides the total dollar value of all arms exports is the number of units of major weapons transferred. This indicator continues to show a similar picture of a major downturn over the decade in terms of the overall total, although exports of numerous weapon types increased during 1993-1995 compared to 1990-1992. The number of weapons by major type delivered to all countries of the world over the last four three-year periods are as follows (in units; Main Table V):

	1984-86	'87-89	'90-92	'93-95
<u>Land Armament</u>				
Tanks	6,589	5,398	3,960	2,513
Artil., Field and Anti-Air	14,422	25,133	13,956	2,425
Armored Pers. Carriers	15,529	9,325	4,900	7,282
<u>Naval Craft</u>				
Major Surface Combatants	58	41	19	54
Other Surface Combatants	328	271	175	149
Submarines	22	8	4	17
Missile Attack Boats	20	24	13	10
<u>Aircraft</u>				
Combat Aircraft, Supers.	1,602	1,441	1,163	692
Combat Aircraft, Subsonic	288	260	168	227
Other Aircraft	2,412	1,936	1,818	600
Helicopters	1,657	1,240	645	714
<u>Missiles</u>				
Surface-to-Air	29,206	22,067	7,953	8,030
Surface-to-Surface	950	2,190	680	30
Anti-Ship	1,724	1,592	713	572
Total, all types	74,807	70,926	36,167	23,315

Such broad quantity measures, of course, can obscure the large variability in size, complexity, and military effectiveness that is possible within a single combination of weapon-type, supplier, and year, as well as across these three dimensions. Nonetheless, the quantity of transfers by weapon type can be a useful indication of the flow of arms.

The decline in major weapons deliveries mirrors that of the overall pattern of decline for worldwide deliveries, with a 69% decline in gross numbers recorded across the four periods recorded and a 35% decline over the latter two periods. Delivery totals by type did show growth for some major weapon types during the last period. Deliveries of armored personnel carriers increased from 4,900 units in 1990-1992 to 7,282 in 1993-1995; major surface combatants, from 19 to 54; submarines, from 4 to 17; subsonic combat aircraft, from 168 to 227; helicopters, from 645 to 714; and surface-to-air missiles, from 7,953 to 8,030.

The Soviet Union/Russia supplied the largest number of weapons over the entire 12-year period, providing 33% of all major weapons sold (Table 11). France had the second largest share with 25%, followed by the United States with 9%, China with 5%, and Germany and the United Kingdom, each with 3%. Soviet dominance was as high as 38% from 1984-1989, but fell behind France (32%) after 1990. During 1993-1995, France's share of total major weapons transferred fell to 22%, Russia and the United States each had a 19% share, Germany, 12%, China, 4%, and the United Kingdom, 3%. These shares across the six major suppliers represent drops from the previous period for France, China, and Russia and increases for Germany, the United States, and the United Kingdom.

Soviet/Russian transfer quantities predominated in numerous weapon types during 1984-1995, including tanks (42% of the world total number), armored personnel carriers (38%), missile attack boats (41%), supersonic aircraft (38%), helicopters (36%), surface-to-air missiles (42%), and surface-to-surface missiles (81%). The United States led the market in terms of subsonic aircraft sold during this period (35%) and anti-ship missiles (25%), France led in artillery (57%), Germany, in major surface combatants (27%) and missile attack boats (39%), and China, in submarine sales (55%).

Regional Recipients

The number of all types of major weapons delivered to each region over the last four three-year periods are as follows:

	1984-86	'87-89	'90-92	'93-95
Middle East	24,302	16,192	15,721	5,214
Western Europe	12,213	24,459	6,041	7,533
South Asia	5,553	13,056	7,392	2,004

North America	103	233	116	593
Central Asia	—	—	—	630
Oceania	—	140	54	128

The Middle East received the largest number of major weapons over the entire 12-year period, with 61,429 or 31% of the total (Main Table V). Of these weapons, roughly 59% were land armaments, 36% were missiles, 5% were aircraft and 1% were naval craft. France supplied 26% of all major

arms supplied to the Middle East during the decade, followed by the Soviet Union/Russia with 24%, the United States with 11%, and China with 10%. During 1993-1995 the Middle East fell behind Western Europe as the leading importer of major weapons, with some 2,319 fewer total weapons delivered, a 22% share. Additionally, the distribution of suppliers to the Middle East continues to shift, with the United States during 1993-1995 providing over half of total deliveries, Russia providing 14%, and the United Kingdom providing 8%.

Western Europe imported 50,246 major weapons into the region over the entire decade, a close second to the Middle East, and led the world with 7,533 major weapons purchased during the last three-year period, 24% and 32% of

total sales, respectively. Overall, internal trade among France (with 60% of the total market), Germany (11%), and the United Kingdom (4%) accounted for three-fourths of the market. The United States provided 8% of the total major weapons delivered into the regions, and the Soviet Union/Russia provided 3%. The latest period of the decade closely mirrors the overall period in the breakdown of suppliers, but with France (38%) and Germany (36%) having nearly equal internal shares of the market. Of the total major weapons delivered into Western Europe, 57% were land armament weapons, 37% were missiles, and 6% were aircraft. In the last three-year period, Western Europe shifted slightly from land armaments (52%) to missiles (41%).

South Asia imported 28,005 major weapons during the entire decade and 2,004 during the 1993-1995 period, 15% and 9% of the total market, respectively. During the 1984-1995 period, the region received 82% of its major weapons from the Soviet Union/Russia, but during 1993-1995 South Asian imports came primarily from France (40%), due largely to the sale of surface-to-air missiles. Of the total major weapons delivered into South Asia during 1984-1995, 57% were land armament weapons, 35% were missiles, and 6% were aircraft.

Africa as a whole imported 21,504 major weapons during the decade, 70% of these going into the Subsaharan region. Total African imports have fallen dramatically over

the decade, a continuance of a trend started prior to the breakup of the Soviet Union, despite a slight increase in North African imports during 1993-1995. There were 1,544 weapons delivered to Africa during 1993-1995, 7% of total world deliveries. Of these, 59% were land armament weapons, 32% were missiles, and 8% were aircraft.

East Asia imported 13,845 major weapons during the entire decade and 2,845 during the 1993-1995 period, 7% and 12% of the total market, respectively. During the decade, the region depended primarily on the United States (30% share of the market), Russia (24%), France (12%), China (10%), and the United Kingdom (9%) for its weapons. Of the total major weapons delivered into South Asia, 51% were missiles, 34% were land armament weapons, and 13% were aircraft.

The remaining regions—North, South, and Central America, Central Asia, and Oceania—imported many fewer weapons. Their combined total of 11,099 major weapons imports during 1984-1995 was 5% of the world total. However, the region's 3,822 major weapons delivered during 1993-1995 accounted for a much higher 16%. This shift can be credited mostly to South America's purchase of 1,580 surface-to-air missiles, 41% of total deliveries.

Military Burden and Other Relative Indicators

The discussion above and the main content of the statistical tables that begin on page 49 are devoted to the basic military indicators that are the subject of this report, namely, military expenditures, arms transfers, and armed forces. In order to give perspective to those military indicators, several basic economic indicators for each country are also presented in the tables, including population, gross national product (GNP), central government expenditures (CGE), and total

trade. These make it possible to place the military measures in socio-economic context, both within one country and among other countries. Figure 18 presents 10 such relative indicators for 1995, averaged for major groupings of countries and regions, in a way that permits their comparison both across the world for a single indicator and across a given group for all the indicators. In the Country Rankings tables below, countries are ranked in terms of these relative indica-

Figure 18. Relative Indicators: 1995

Average Relative Indicators

The ten average ratios for the world, regions, and other country groupings in Figure 18 are based on data for basic military and economic variables by country in Main Statistical Tables I and II, below. In the Country Rankings tables, all countries are ranked in 1995 for these relative indicators as well as for the main absolute measures.

The average indicators in Figure 18 are calculated as the ratio of the group total of the numerator variable to the group total of the denominator variable. Such a ratio is equivalent to the weighted average of individual country

ratios, with the denominator variable serving as the weighting factor. Such an average ratio can differ considerably from a simple average of individual country ratios, particularly when a very large country (e.g., China, Russia, US) is in the group. Also, when the denominator is a value measure such as GNP, the relative weights of the countries can shift from edition to edition of this report due to the change in the basic year for currency conversion and changes in relative average exchange rates that occur from year to year. See Statistical Notes, Conversion . . . to dollars, for further discussion of the impacts of changes in exchange rates.

Relative Arms Trade and Economic Indicators

tors as well as the main military measures.

One such relative indicator, the force ratio, or the ratio of armed forces to population, has been discussed above in the Armed Forces section of these highlights and also appears in the first column of Figure 18. Selected other indicators are treated briefly below, including the main "burden" ratio, military expenditures-to-GNP; military expenditures-to-CGE; military expenditures per capita; military expenditures per member of the armed forces; and two arms-to-total trade ratios.

The ME/GNP Ratio

One of the most commonly used measures of the "military burden" is the ratio of military expenditures to GNP, ME/GNP (column 2 of Figure 18). The average ME/GNP burden ratio for the world fell to 2.8% in 1995, continuing a trend of consecutive reductions since 1986. The 1995 ratio fell to just over half of that recorded at the beginning of the decade and is the same ratio for both developed and developing countries as well as the world (Table 11 and Main Table I). Both the world and the developed country ratios dropped from 3% in 1994. These two ratios are historically close to each other or identical since this ratio is weighted by GNP. The developing country ME/GNP ratio, on the other hand, had been higher than the developed at the beginning of the decade, then dropped faster until a rise in 1990 under Middle East influence, then again dropped faster until 1994-1995, when it stayed at the same 2.8% level.

Overall, the ME/GNP ratio declined in all regions over the decade. The largest drops were posted in the Middle East, with almost 9 percentage points less in 1995 than in 1985, Eastern Europe, 5 points less, and North Africa, 4.

The Middle East had the highest ratio, 7.9%, of any region in 1995; it and Eastern Europe were the only regions of the world to record ME/GNP ratios over 5%. The Middle East has shown steady annual declines from the very high ratios in the high-to-mid teens recorded at the beginning of the decade and during the 1990-1992 Gulf War bulge. The 1995 ratio was nearly 10 percentage points less than the decade high of 17.4% recorded in 1986.

Four Middle East countries—Oman (17%), Saudi Arabia (14%), Kuwait (12%), and Israel (10%)—had ratios of 10% or higher in 1995 despite sizable previous declines. Kuwait and Saudi Arabia peaked in 1991 and dropped as a result of the post-Gulf War reductions in spending. Israel and Oman, on the other hand, reduced over the entire decade. Israel's peak was in 1985 at over 20%, while Oman's was in 1986 at 27%.

Of the remaining countries, all except Jordan (8%) and Syria (7%) had ratios of 6% or lower. Iran's ratio of 2.6% in 1995, though roughly estimated, comes after a continuous decline from the high ratios of the early years of the decade and is 8 percentage points lower than in 1986, the peak year.

Six of the eleven countries in the world with estimated ME/GNP ratios of 10% or over were in the Middle East, including the four mentioned above plus Iraq and Yemen, whose absolute values are only roughly estimated. Bosnia and Herzegovina (NA), North Korea (29%), Serbia and Montenegro (NA), Russia (11%—although see discussion below), and Croatia (10%) are the remaining countries with ratios reaching this level.

Estimates of the burden ratio for most of the former Warsaw Pact countries and successor states after the collapse of the Soviet Union continue to be very rough and highly tentative; they should be treated with extra caution. Estimates reported here are often derived from a variety of sources that may not be consistent either within or among

Table 11

CIS	—	—	11.0	8.4

themselves as to relationships among variables or over time. In particular, the nominal ME/GNP burden ratios shown here for Russia in 1992-1995 are probably somewhat high; other sources estimate the ratio for Russia to be in a range well under 10%. Consequently, the burden ratio for those country groupings in which Russia has a large weight, such as Eastern Europe and the former Warsaw Pact, may also be overstated. The North Korean military expenditures estimate is also highly tentative.

The decline of North Africa's burden ratio by almost four percentage points over the decade can be credited mainly to Libya, whose ratio has fallen from 13% in 1989 to 6% in 1995.

The burden ratios of North America and Western Europe each have undergone modest decline over the decade, by two and one percentage points, respectively.

The ratio for NATO as a whole declined over the decade by almost two percentage points, from a high of almost 5% in 1985 to 3% in 1995. Greece (5.5%), the United States (4%), and Turkey (4%) had the highest ratios of all NATO countries, the remaining countries recording ratios of 3% or less.

Figure 19 below cross-classifies all countries in 1995 according to both burden ratio and income level, as measured by GNP per capita. The widespread scatter of countries

+ Ranking is based on a rough approximation of one or more variables, for which 1995 data or a reliable estimate is not available.

throughout the entire matrix suggests that relative income level or stage of development is not a critical determinant of the burden ratio. Involvement in civil or external war, military threats by neighbors, or overemphasis on military power are probably more relevant determinants, along with the fundamental influence of the absolute income (or GNP) level.

The series of annual matrices of this kind contained in successive editions of this report have reflected the general tendency of burden ratios to decline in recent years, in that the most dense cells in the matrix have moved downward. However, that tendency does not appear in a comparison of the matrix for 1995 shown here with the matrix for 1994 published in *WMEAT 1995*. In fact, the present matrix for 1995 has some upward movement. (The contrast between the decline in the world average burden ratio and the upward shift of countries in this figure probably reflects the upturn in the burden ratio of developing countries cited above, as well as the distinction between weighted and simple average ratios noted in the box, above. The burden ratio is weighted by GNP while the country locations in Figure 19 are unweighted).

The ME/CGE Ratio

The percentage of central government expenditures spent on defense (ME/CGE) is another useful measure of military effort. It complements the ME/GNP ratio and can show a differing comparative burden level from the latter, since ratios of CGE to GNP vary considerably (see Figure 18, last column). Thus, for example, ratios for ME/CGE in 1995 ranged from almost 24% in the Middle East to just over 5% in Central America (Figure 18, column three and Table 12).

The world average share of central government expenditures spent on the military was 10% in 1995, also the lowest level of the decade for this ratio. This drop occurred in the developed countries, whose ME/CGE ratio fell slightly to just over 9%. This continues a decade-long downward trend from ratios of the early years of the decade as high as 18%. The ME/CGE ratio for developing countries, on the other hand, fell to a low of under 12% in 1993 but has turned back up to 13% in 1995.

Four regions—Middle East (24%), North America (16%), South Asia (15%), and North Africa (11%)—had ratios of 10% or higher in 1995. Ratios of the remaining regions ranged from 9% to 5%.

Over the decade, ratios fell for all regions of the world except South America and Central Asia, which had small increases between 1993 and 1995. The largest decline in ME/CGE was recorded by Eastern Europe, 22 percentage points. The change over the decade in the Middle Eastern ratio was also high (9 percentage points), as was North Africa

Latin America	5.9	7.6	5.9	6.2
CIS	—	—	26.1	31.1

(just under 9 points), and North America (slightly over 7). In the Middle East, the 1991 Gulf War high-point reached the astounding (weighted) average of 51%, and for some countries (Kuwait, United Arab Emirates), the ratio soared well above 100% (due to external war-cost repayments).

The countries with the five highest ME/CGE ratios, Bosnia and Herzegovina, Yemen, Russia, Mozambique, and Serbia and Montenegro—all listed as "not available" in Main Table I—are based on very rough estimates of the absolute values.

ME per Capita

The military expenditures per capita ratio, another complementary measure of military burden or effort, also shows a wide gap between developed and developing countries (Figure 18, column four). The gap amounted to \$536 in 1995 when the measure averaged \$580 for developed and

\$44 for developing countries. This gap has narrowed steadily over the decade, with the ratio falling faster for developed countries. The world average in 1995 was \$152 per capita.

In 1995, North America led the world's regions in terms of this ratio with \$750, followed at a distance by Western Europe (\$449) and Oceania (\$348). The lowest ratios were recorded by Subsaharan Africa (\$7), South Asia (\$11), and Central America (\$20).

The four top countries with military expenditures per capita of over \$1,000 in 1995 were Kuwait (\$1,919), Israel (\$1,646), Singapore (\$1,191) and the United States (\$1,056). In stark contrast, 38 countries in 1995 spent under \$10 (and as little as \$2) per capita on their military establishments, including Subsaharan African countries but also such significant military powers as India and Vietnam (Country Rankings).

ME/AF Ratio

Military expenditures per member of the armed forces (ME/AF) is a different kind of relative indicator. Rather than burden, it measures the level of armament and military effort per soldier (to the extent that the dollar values of military expenditures, usually exchange-rate-converted, succeed in measuring that effort accurately).

In terms of this indicator, developed countries in 1995 (averaging \$87,100) exceeded the developing countries (averaging \$13,000) by roughly 7 times, with a difference between the two groups of \$74,100 (Figure 18, column five).

In 1995, the highest regional ratios were again recorded by North America (\$155,100) and Oceania (\$120,800). Western Europe had a ME/AF ratio of \$62,900 in 1995 while all other regions recorded ratios below \$50,000. The lowest was Subsaharan Africa's \$3,800.

Twelve countries spent over \$100,000 per soldier in 1995, including Japan, which topped the list at \$209,400. The twelve also included seven Western European countries, the United States, Canada, and Australia. Kuwait—ranked second in the world with \$174,400—was the only developing nation in this grouping. In contrast, the lowest included Zaire, with under \$400 (except for several countries with no military spending; see Country Ranking.)

Arms Trade/Total Trade

The world average ratio of arms trade to total trade rose slightly from 1994 to 1995, to 0.7%. This increase marks a switch from the steady decline of this ratio over the decade, after peaking at 2.7% in 1985. In terms of its four

main components, this ratio looks as follows (in percent; Main Table I):

	Developed	Developing
Arms imports/total imports:		
1985	0.9	10.2
Peak	.9 ('85-7)	11.5 ('87)
1995	.3	2.2
Arms exports/total exports:		
1985	3.2	0.9
Peak	3.2 ('85)	1.5 ('88)
1995	.8	.2

Over the decade, all four of the above component ratios were reduced by two-thirds or more, and each peak was recorded during the early years of the decade, 1985-1988.

Table 13

CIS	—	.4	—	3.5

The Middle East imported the highest amount of arms as a percentage of its total imports (AI/TI) in 1995, 9.7%, compared to a ratio of almost 22% in 1985. Central Asia recorded the next highest AI/TI ratio, with 3.2%, followed by South Asia with 1.9%. South Asia, the Middle East, Sub-Saharan Africa, North Africa, and Central America reduced their ratios substantially over the decade, each by 10 percentage points or more from the peak year to 1995. South Asia experienced the largest decline, with almost 20 percentage points less in 1995 than in 1989, along with both the Middle East and Sub-Saharan Africa, down 18 and 17 points, respectively, from peaks in 1987.

Six nations recorded AI/TI ratios of over 10% in 1995, topped by Bosnia and Herzegovina, although again, its ranking is based on highly estimated absolute values. Bosnia was followed by four Middle East countries—Saudi Arabia (31%), Egypt (16%), Kuwait (12%), and Oman (11%)—and Burma (10.5%).

In terms of exports, Eastern Europe had the highest ratio of arms exports as a percentage of total exports (AE/TE) in 1995, with a ratio of 2.1%. This ratio compares with 12.2% in 1985, down about ten percentage points.

North America recorded the next highest ratio, 1.9%. All other regions recorded AE/TE ratios of 1% or less during 1995. Nicaragua led all countries in this ratio, with slightly under 8%.

Other Indicators

GNP per capita for the world as a whole rose by 1% in 1995 to \$5,459. This is the second consecutive rise for this ratio after having fallen steadily from a peak of \$5,634 in 1989 through 1993. Both the developed and developing country groupings continued an upward trend in 1995, growing by 1.4% and 2.9%, respectively. Over the decade, GNP per capita grew by \$3,470 for developed countries and by almost \$400 for developing countries (Main Table I). Small declines in the average were registered in 1995 by Eastern Europe, Central Asia and Caucasus, Middle East, North Africa, and Sub-Saharan Africa.

North America (\$20,800), Western Europe (\$19,500), and Oceania (\$15,300) continue to be the richest regions of the world. South Asia (with \$358 per capita) and Sub-Saharan Africa (\$417) had the lowest average ratios.

TABLE I. Military Expenditures, Armed Forces, GNP, Central Government Expenditures and Population, 1985-1995 — continued

E Estimate based on partial or uncertain data.
 NA Not available.
 P Estimate based on PPP (see Statistical Notes).
 R Rough Estimate (see Statistical Notes).
 0 Nil or negligible.

- a In order to reduce distortions in the trends for world, region, and organization totals caused by data gaps for individual countries and years (shown as "NA"), rough approximations for all gaps are included in the totals.
- b Estimated by adding arms imports to data on military expenditures, which are believed to exclude arms purchases. However, it should be noted that the value of arms deliveries in a given year, as shown in Table II (converted at current exchange rates), may differ significantly from actual expenditures on arms imports in that year.
- c This ratio is calculated from the dollar values shown in previous columns. In most cases it also is equal to the ratio that could be calculated from national currency values, since both numerator and denominator are usually converted into dollars by the same exchange rate or other conversion factor. In the case of this country, however, the two variables are converted at differing rates, yielding a different ratio than would obtain in national currency. The ratio for Russia in rubles terms, for example, is believed to be less than 10 percent in 1995. See Statistical Notes, Military Expenditures-to-GNP Ratio for further discussion.
- d This series or entry is believed to omit a major share of total military expenditures, probably including most expenditures on arms procurement. Table II shows estimated annual arms imports; it should be kept in mind, however, that data in Table II represent the estimated value of arms delivered in a given year, not actual expenditures on those arms.
- e Germany, (The Federal Republic of), was known as West Germany through 1990, when data for East Germany ended.
- f Some part of estimated total military expenditures may not be included in announced central budget expenditures. The ratio of ME to CGE therefore may be overstated.
- g Unified Yemen as of 1990 is shown under Yemen (Sanaa); data for Yemen (Aden) end in 1989.

**TABLE II. Arms Transfer Deliveries and Total Trade, 1985-1995
By Region, Organization, and Country — continued**

E Estimate based on partial or uncertain data. 0 Nil or negligible (\$2.5 million or less). NA Not available.

- a To avoid the appearance of excessive accuracy, arms transfer data by country are rounded, with greater severity for larger amounts. All country group totals for arms exports and arms imports shown here are the sums of rounded country data, except for world totals, which are the rounded sums of unrounded country data. This exception is made to preserve the equality of world arms exports and world arms imports; the rounded country data produce unequal world summations.
- b Total imports and exports usually are as reported by individual countries and the extent to which arms transfers are included is often uncertain. Imports are reported "cif" (including cost of shipping, insurance, and freight) and exports are reported "fob" (excluding these costs). For these reasons and because of divergent sources, world totals for imports and exports are not equal.
- c Because some countries exclude arms imports or exports from their trade statistics and their "total" imports and exports are therefore understated and because arms transfers may be estimated independently of trade data, the resulting ratios of arms to total imports or exports may be overstated and may even exceed 100 percent.
- d In order to reduce distortions in grouped data trends caused by data gaps for individual countries and years (shown as "NA"), the totals for the world, regions, and organizations include rough approximations for the gaps.
- e Includes US transfers to NATO agencies as such and to other international agencies and classified transfers, which are not attributable to individual recipient countries.
- f Germany (The Federal Republic of) was known as West Germany through 1990, when data for East Germany ended.
- g Includes major equipment purchased by the US Army Corps of Engineers for use in military construction projects in Saudi Arabia, recorded in US accounts as US imports.
- h US arms exports data shown in the last two editions has been revised upward substantially from previous editions, as have US arms imports in the last five editions. (See Statistical Notes, Redefinition of US Arms Exports, Arms Imports.)
- i The Yemens became unified on May 22, 1990. Arms purchases made by unified Yemen following this date are shown under Yemen (Sanaa).

@ Developed country (all others are "developing").

OPEC country

X Not applicable.

0 Nil or negligible (\$2.5 million or less), except that where "Supplier" (other than U.S.) and "Recipient" are single countries, "0" may mean: \$50 million or less. (See last line of the table for total amount not distributed by individual recipient.)

NOTE: To avoid the appearance of excessive accuracy, the entries in this table are independently rounded, with greater severity for larger numbers. Totals here are the sum of the rounded components.

- a Comparable totals in Tables III and IV do not agree precisely due to the fact that rounding was done at different stages of aggregation.
- b US arms transfers to the World, Developed, and Developing groupings include transfers to NATO agencies as such and to other international agencies and classified transfers, which are not attributed to individual recipient countries or regions.
- c Includes major equipment purchased by the US Army Corps of Engineers for use in military construction projects in Saudi Arabia, recorded in US accounts as imports to the US. These purchases, not attributable to individual supplier countries, are included under "Others".

— \$3 to 50 million. 0 Nil or negligible (less than \$3 million).

- a Comparable totals in Tables III and IV differ slightly due to the fact that rounding was done at different stages of aggregation. The entry in the World column in Table IV exceeds the sum of the components in some rows due to certain imports by Saudi Arabia that cannot be attributed to specific suppliers. See Table II, footnote g.
- b The estimated dollar value of the Soviet Union's arms exports in this and the previous six editions are revised and are substantially larger than those in earlier editions. For further discussion, see Statistical Notes, Arms Transfers.
- c US arms transfers to the World, Developed, and Developing groups include those to NATO agencies as such and to other international agencies and classified transfers, which are not attributed to individual recipient countries or regions.

TABLE V. Number of Major Weapons Delivered to Regions and Groups, By Supplier and Weapon Type, Cumulative by Period

TABLE V. Number of Major Weapons Delivered to Regions and Groups, By Supplier and Weapon Type, Cumulative by Period — continued

0 Nil or Negligible

- a Suppliers include the six largest exporters of major weapons, as well as other major groups.
- b Soviet weapon deliveries ended in 1991 in the main, although a small number were delivered in 1992 under prior-year agreement and are attributed here to Russia.
- c Air defense artillery includes weapons over 23mm. Field artillery includes mobile rocket launchers, mortars, and recoilless rifles over 100mm.
- d Major surface combatants include aircraft carriers, cruisers, destroyers, destroyer escorts, and frigates.
- e Other surface combatants include motor torpedo boats, subchasers, and minesweepers.
- f Other aircraft include reconnaissance aircraft, trainers, transports, and utility aircraft.

Statistical Notes

These notes define the country groupings and variables employed in the Statistical Tables, identify the sources of information, and explain the methods of handling data. A primary aim is to inform the reader of the main qualifications to the data, much of which is not as accurate and reliable as uniform presentation in statistical tables may imply. This is particularly true of the data on military expenditures, armed forces, and arms transfers, which in many countries are subject to severe limitations of incompleteness, ambiguity, or total absence due to governmental secrecy.

Coverage and Groups of Countries

The statistical tables report data for 172 countries (167 in 1995), including most members of the United Nations as well as nonmembers Switzerland and Taiwan. UN members not covered are generally small and not considered militarily significant; relevant data for them are frequently unavailable.¹

Countries are grouped into normally defined **geographical regions** with the following exceptions: Egypt is assigned to the Middle East rather than to Africa; and Oceania includes only Australia, New Zealand, Papua New Guinea, and Fiji. Note the following redefined and new regions beginning with *WMEAT 1993-1994*: Mexico has been added to Canada and the United States to form **North America** in the "NAFTA" sense; **Central America and the Caribbean** and **South America** replace Latin America; **Central Asia and the Caucasus** contains eight republics from the former Soviet Union (since 1992); **Western Europe** consists of NATO Europe plus Austria, Finland, Ireland, Malta, Sweden, and Switzerland; **Eastern Europe** contains the former Warsaw Pact countries plus Albania and the successors to Yugoslavia and the Soviet Union, except those republics from the latter that are detached to Central Asia and Caucasus. A full listing of specific countries in each region may be found in Main Statistical Table III (pages 151 - 155).

The following political and economic groups are included: NATO, the (former) Warsaw Pact, OPEC, and

OECD. **NATO (North Atlantic Treaty Organization)** consists of Belgium, Canada, Denmark, France, West Germany, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Turkey, the United Kingdom, and the United States. Spain joined in 1982, and its membership has since been reaffirmed. Although its participation is limited and still evolving, Spain has been included in the NATO grouping since *WMEAT 1991-1992*. France also limits its military participation (since 1966), but is traditionally associated with NATO and is therefore included in the group. The **Warsaw Pact** was formally dissolved on July 1, 1991. It consisted of Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania, and the Soviet Union. **OPEC (Organization of Petroleum Exporting Countries)** includes Algeria, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. **OECD (Organization for Economic Cooperation and Development)** comprises the NATO countries and Australia, Austria, Czech Republic, Finland, Hungary, Ireland, Japan, Mexico, New Zealand, Sweden, and Switzerland.

The 33-country **developed** group was revised in the 1995 edition (primarily on the basis of GNP per capita) by shifting the Czech and Slovak Republics, Greece, Israel, Singapore, South Korea, and Taiwan from the developing group to the developed, and Romania from developed to developing. The developed group in this edition includes the following countries: all Western Europe except Malta and Turkey; in Eastern Europe, all former Warsaw Pact members (including Czechoslovakia's successors and Russia) except Bulgaria, Romania, and the successor states to the Soviet Union other than Russia; in East Asia, Japan, Singapore, South Korea, and Taiwan; in Oceania, Australia and New Zealand; and Israel and South Africa. The specific countries in each region classed as developed are so designated in Main Statistical Table III (pages 151 - 155).

All other countries are classified as **developing**. Besides the newly independent and transitioning economies except Russia coming out of the Soviet Union and Yugoslavia, this developing group includes: the other

¹ The UN member countries as of 1995 not covered are Andorra, Antigua and Barbuda, the Bahamas, Comoros, Dominica, Grenada, Liechtenstein, Maldives, Marshall Islands, Micronesia, Monaco, Montserrat, Palau, Saint Christopher and Nevis, Saint Lucia, Saint Vincent and the Grenadines, San Marino, Seychelles, Solomon Islands, Vanuatu, and Western Samoa. Also excluded are: nonmember countries Kiribati, Nauru, Tonga, and The Holy See; the territory with unresolved sovereignty of Western Sahara; the dependencies and areas of special sovereignty of Bermuda, Hong Kong, Macau, Puerto Rico, and numerous others, many being very small islands in the Atlantic and Pacific Oceans.

recently or presently communist countries of Albania, Bulgaria, Cambodia, Mainland China, Cuba, Laos, Mongolia, North Korea, Romania, and Vietnam; all countries in: Africa except South Africa, Central Asia and Caucasus, Central America and the Caribbean, South America, South Asia, and the Middle East except Israel; the rest of East Asia other than Japan, Singapore, South Korea, and China Taiwan; Fiji and Papua New Guinea in Oceania; and Malta and Turkey in Western Europe.

Most of the data are for calendar years. For some countries, however, expenditure data are available only for fiscal years which diverge from calendar years. In such cases, the fiscal year which contains the most months of a given calendar year is assigned to that year; e.g., data for the fiscal year April 1994 through March 1995 would be shown under 1994. Data for fiscal years ending on June 30 are normally entered under the calendar year in which they end.

Sources and Definitions

Military Expenditures

For NATO countries, military expenditures are from NATO publications and are based on the NATO definition. In this definition, (a) civilian-type expenditures of the defense ministry are excluded and military-type expenditures of other ministries are included; (b) grant military assistance is included in the expenditures of the donor country; and (c) purchases of military equipment for credit are included at the time the debt is incurred, not at the time of payment.

For other non-communist countries, data are generally the expenditures of the ministry of defense. When these are known to include the costs of internal security, an attempt is made to remove these expenditures. A wide variety of data sources is used for these countries, including the publications and data resources of other US government agencies, standardized reporting to the United Nations by country, and other international sources.

It should be recognized by users of the statistical tables that the military expenditure data are of uneven accuracy and completeness. For example, there are indications or reasons to believe that the military expenditures reported by some countries consist mainly or entirely of recurring or operating expenditures and omit all or most capital expenditures, including arms purchases. In the case of several countries (Algeria, Chile, Cuba, Ecuador, Egypt, Iraq, Iran, Libya, Nigeria, and Syria), special note of this possibility is made in Table I.

In some of these cases (as indicated in the footnotes of Table I), it is believed that a better estimate of total mili-

tary expenditures is obtained by adding to nominal military expenditures the value of arms imports (as shown in Table II and converted to local currency by current exchange rates). It must be cautioned, however, that this method may over- or underestimate the actual expenditures in a given year due to the fact that payment for arms may not coincide in time with deliveries, which the data in Table II reflect. Also, arms acquisitions in some cases may be financed by, or consist of grants from, other countries.

In Statistical Table I, the symbol "E" denotes rough estimates such as those described above and others made on the basis of partial or uncertain data. In a few cases of particular interest, very rough estimates are also shown, marked with the symbol "R". It should be understood that these estimates are based on scant information and are subject to a wide range of error.

For countries that have major clandestine nuclear or other military weapons development programs, such as Iraq, estimation of military expenditures is extremely difficult and especially subject to errors of underestimation.

Further improvements in the quality of the military expenditure data presented for countries throughout the world will be difficult to achieve without better reporting by the countries themselves. As has been noted elsewhere, "There is growing evidence that important amounts of security expenditures may not enter the accounts or the national budgets of many developing countries."² Among the mechanisms commonly used to obscure such expenditures are: double-bookkeeping, use of extra-budgetary accounts, highly aggregated budget categories, military assistance, and manipulation of foreign exchange.

Particular problems arise in estimating the military expenditures of communist countries due to the exceptional scarcity and ambiguity of released information. As in past editions of this publication, data on the military expenditures of the Soviet Union are based on Central Intelligence Agency (CIA) estimates. For most of the series, these are estimates of what it would cost in the United States in dollars to develop, procure, staff, and operate a military force similar to that of the Soviet Union.³ Estimates of this type—that is, those based entirely on one country's price pattern—generally overstate the relative size of the second

² Nicole Ball, "Measuring Third World Security Expenditure: A Research Note," *World Development*, February 1984, pp. 157-164 (Pergamon Press, London).

³ See CIA, *Soviet and US Defense Activities, 1971-80: A Dollar Cost Comparison*, January 1981. The CIA dollar estimates as shown in this source have been updated and augmented by estimated retirement pay at US rates in order to improve comparability with expenditures by NATO countries, which include retirement pay.

country's expenditures in intercountry comparisons.⁴ Also, such estimates are not consistent with the methods used here for converting other countries' expenditures into dollars.⁵

Nevertheless, the basic CIA estimates are the best available for present purposes; in fact, there are no alternative estimates that can inspire confidence and have the capability to detect relatively small changes over time, such as the slowdown and decline in Soviet military spending that the CIA estimates have indicated. Soviet estimates for the most recent years are based on the change in the index of CIA-estimated military expenditures in ruble terms, as reported in the Joint Economic Committee of Congress series, *Allocation of Resources in the Soviet Union and China*, *op. cit.*

For Russia, estimated military spending trends in rubles are used in conjunction with dollar estimates for earlier years to make very rough estimates of spending in dollars. (See also the section on the ME/GNP ratio, below.)

For former Warsaw Pact countries other than the Soviet Union, the estimates of military expenditures through 1989 are from Thad P. Alton *et al.*⁶ These estimates cover the officially announced state budget expenditures on national defense and thus understate total military

expenditures to the extent of possible defense outlays by non-defense agencies of the central government, local governments, and economic enterprises. Possible subsidization of military procurement may also cause understatement. The dollar estimates were derived by calculating pay and allowances at the current full US average rates for officers and for lower ranks. After subtraction of pay and allowances, the remainder of the official defense budgets in national currencies was converted into dollars at overall rates based on comparisons of the various countries' GNPs expressed in dollars and in national currencies. The rates are based in part on the purchasing power parities (PPPs) estimated by the International Comparison Project of the United Nations, including their latest (Phase V) versions.

Estimates for these countries in 1990 and 1991 are based on total military spending in national currency as reported by the respective governments to the UN (in most cases) or the IMF. These expenditures in toto are converted to dollars at the Alton GNP conversion rates for 1989 as adjusted to 1991 by the respective US and national GNP deflators (per the World Bank), without estimating personnel compensation separately at US dollar rates, as was done for earlier years. The resulting military conversion rates (in national currency per dollar) are substantially higher than the implied rates for previous years, substantially lower than the 1991 market rate, and approximately the same as the implied rate for GNP (see below).

Estimates for the newly independent states of the former Soviet Union, Yugoslavia, and Czechoslovakia and other former Warsaw Pact countries present difficulties due to scarcity of reliable data in national currencies and to problems in converting to dollars. The basic method employed for most of these countries was to establish the ratio of military expenditures to GNP in national currency and then to multiply this ratio by the World Bank's estimate of GNP in dollars as converted to international dollars by estimated PPPs and reported in the *World Bank Atlas 1997*. This method implicitly converts military spending at the GNP-wide PPP, which, as with conversion by exchange rates, preserves the same ME/GNP ratio in dollars as obtains in national currency.

Data for China are based on US Government estimates of the yuan costs of Chinese forces, weapons, programs, and activities.⁷ Costs in yuan are here converted to dollars using the same estimated conversion rate as used for GNP (see below). Due to the exceptional difficulties in

⁴ This tendency is widely recognized in both government and non-government circles. For detailed commentaries by academic and government witnesses on this and other problems in estimating and comparing Soviet military expenditures, see the series of Hearings held before the Subcommittee on National Security Economics and the Subcommittee on Technology and National Security, Joint Economic Committee, Congress of the United States, *Allocation of Resources in the Soviet Union and China*. See also Hearing before the Subcommittee on Oversight of the Permanent Select Committee on Intelligence, Congress of the United States, "CIA Estimates of Soviet Defense Spending," Ninety-Sixth Congress, Second Session; Donald F. Burton. "Estimating Soviet Defense Spending," *Problems of Communism*. March-April 1983; and Richard F. Kaufman. "Causes of the Slowdown in Soviet Defense" (with comments by others), *Soviet Economy*, January-March 1985.

⁵ An alternative series employing the same basic data but reflecting both the US and Soviet price patterns was provided in previous editions of this publication. See table captioned "Alternative Estimates of Soviet Military Expenditures," *World Military Expenditures and Arms Transfers 1969-1978*, p.27; and the essay, "Soviet Military Expenditures," *World Military Expenditures and Arms Transfers 1968-1977*, pp. 13-19.

⁶ The estimates are updates and substantial revisions of those in their article, "East European Military Expenditures, 1965-1978," (published in the Joint Economic Committee of Congress Compendium, *East European Economic Assessment*, Part 2, July 10, 1981, pp. 409-433) and particularly in their most recent Occasional Papers, Nos. 115-119 (published by the Research Project on National Income in East Central Europe).

⁷ Edward P. Parris, *Chinese Estimated Expenditures, 1967-83*. (Defense Intelligence Agency), November 1984. See also the series of Hearings before the Subcommittee on Priorities and Economy in Government of the Joint Economic Committee, US Congress, "Allocation of Resources in the Soviet Union and China," *op. cit.*

both estimating yuan costs and converting them to dollars, comparisons of Chinese military spending with other data should be treated as having a wide margin of error.

Other published sources used include the *Government Finance Statistics Yearbook*, issued by the International Monetary Fund; *The World Factbook*, produced annually by the Central Intelligence Agency; *The Military Balance*, issued by the International Institute for Strategic Studies (London); and the *SIPRI Yearbook: World Armaments and Disarmament*, issued by the Stockholm International Peace Research Institute.

For the benefit of users concerned with accuracy, table entries based on inadequate data and/or simplistic methods and yielding approximative estimates that are not fully comparable with those for earlier years are marked "R" for "rough estimate".

Gross National Product (GNP)

GNP represents the total output of goods and services produced by residents of a country, valued at market prices. The source of GNP data for most non-communist countries is the International Bank for Reconstruction and Development (World Bank).

For a number of countries whose GNP is dominated by oil exports (Bahrain, Kuwait, Libya, Oman, Qatar, Saudi Arabia, and the United Arab Emirates), the World Bank's estimate of deflated (or constant price) GNP in domestic currency tends to understate increases in the monetary value of oil exports, and thus of GNP, resulting from oil price increases. These World Bank estimates are designed to measure real (or physical) product. An alternative estimate of constant-price GNP was therefore obtained using the implicit price deflator⁸ for US GNP (for lack of a better national deflator). This is considered appropriate because a large share of the GNP of these countries is realized in US dollars.

GNP estimates of the Soviet Union are by the CIA, as published in its *Handbook of Economic Statistics 1990* and updated. GNP estimates for other Warsaw Pact countries through 1989 are from "East European Military Expenditures, 1965-1978" by Thad P. Alton and others, *op. cit.*, as updated and substantially revised by the authors. These estimates through 1989 have been extended to 1990 and 1991 on the basis of estimates for those years in the CIA's *Handbook of Economic Statistics, 1992*.

Estimates of GNP in 1992-1994 for successor states to the Soviet Union, Yugoslavia, and Czechoslovakia are

⁸ The implicit price deflator is the ratio of GNP in current prices to GNP in constant prices.

based on World Bank estimates of GNP per capita employing PPPs and of population, as published in the *World Bank Atlas 1997*.

GNP data for China are based on World Bank estimates in yuan. These are in line with estimates of GDP in Western accounting terms made by Chinese authorities. Converting estimates in yuan to dollars is highly problematic, however, due to the inappropriateness of the official exchange rate and lack of sufficient yuan price information by which to reliably estimate PPPs. (The ratio of the highest to the lowest estimates by various sources of China's GNP is on the order of 6 or 7 to 1, which would make the world rank of China's GNP vary between about 3rd or 4th and 12th.) The conversion rate used here is based on a PPP estimated for 1981⁹ and moved by respective US and China implicit GNP deflators to 1994.

GNP estimates for a few non-communist countries are from the CIA's *Handbook of Economic Statistics* cited above. Estimates for the other communist countries are rough approximations.

Military Expenditures-to-GNP Ratio

It should be noted that the meaning of the ratio of military expenditures to GNP, shown in Table I, differs somewhat between most communist (or previously communist) and other countries. For non-communist countries, both military expenditures and GNP are converted from the national currency unit to dollars at the same exchange rate; consequently, the ratio of military expenditures to GNP is the same in dollars as in the national currency and reflects national relative prices. For communist countries, however, military expenditures and GNP are converted differently. Soviet military expenditures, as already noted, are estimated in a way designed to show the cost of the Soviet armed forces in US prices, as if purchased in this country. On the other hand, the Soviet GNP estimates used here are designed to show average relative size when both US and Soviet GNP are valued and compared at both dollar and ruble prices. The Soviet ratio of military expenditures to GNP in ruble terms, the preferred method of comparison, is estimated to have been 15-18% in that country's latest years.

The estimated ratio for Russia derived here in dollars is probably somewhat overstated, since military spending in dollars is related to earlier estimates for the Soviet Union,

⁹ Jeffrey R. Taylor, *Dollar Estimates for China*, Center for International Research Staff Paper No. 59, US Bureau of the Census, March 1991. This PPP appears to be carefully constructed from detailed Chinese data and yields an intermediate result. When moved to 1993, this parity (1.293 yuan/dollar) is used to produce dollar values in the same manner as the 1993 exchange rate for other countries. (See below, Conversion of National Currencies to Dollars.)

while GNP estimates (at PPPs) are by the World Bank. Russia's burden ratio in ruble terms is preferably estimated to be under 10%.

For Eastern European countries before 1992, the ratios of military expenditures to GNP in dollars were about twice the ratios that would obtain in domestic currencies. (See Alton and others, *op. cit.*) However, since official military budgets in these countries probably substantially understated their actual military expenditures, the larger ratios based on dollar estimates are believed to be the better approximations of the actual ratios.

Central Government Expenditures (CGE)

These expenditures include current and capital (developmental) expenditures plus net lending to government enterprises by central (or federal) governments. A major source is the International Monetary Fund's *Government Finance Statistics Yearbook*. The category used here is "Total Expenditures and Lending minus Repayment, Consolidated Central Government".

Other sources for these data are the International Monetary Fund, *International Financial Statistics* (monthly); OECD, *Economic Surveys*; and CIA, *The World Factbook* (annual). Data for Warsaw Pact countries are from national publications and are supplied by Thad P. Alton and others. For all Warsaw Pact countries and China, conversion to dollars is at the implicit rates used for calculating dollar estimates of GNP.

For all countries, with the same exceptions as noted above for the military expenditures-to-GNP ratio, military expenditures and central government expenditures are converted to dollars at the same rate; the ratio of the two variables is thus the same in dollars as in national currency.

It should be noted that for the Soviet Union, China, Iran, Jordan, and possibly others, the ratio of military expenditures to central government expenditures may be overstated, inasmuch as the estimate for military expenditures is obtained at least in part independently of nominal budget or government expenditure data, and it is possible that not all estimated military expenditures pass through the nominal central government budget.

Population

Population estimates are for midyear and are made available to ACDA by the US Bureau of the Census.

Armed Forces

Armed forces refer to active-duty military personnel, including paramilitary forces if those forces resemble regular units in their organization, equipment, training, or mission. Reserve forces are not included unless specifically noted.

Figures for the United States and all other NATO countries are as reported by NATO. Estimates of the number of personnel under arms for other countries are provided by US Government sources. The armed forces series for the Soviet Union includes all special forces judged to have national security missions (e.g., KGB border guards) and excludes uniformed forces primarily performing noncombatant services (construction, railroad, civil defense, and internal security troops).

Arms Transfers

Arms transfers (arms imports and exports) represent the international transfer (under terms of grant, credit, barter, or cash) of military equipment, usually referred to as "conventional," including weapons of war, parts thereof, ammunition, support equipment, and other commodities designed for military use. Among the items included are tactical guided missiles and rockets, military aircraft, naval vessels, armored and nonarmored military vehicles, communications and electronic equipment, artillery, infantry weapons, small arms, ammunition, other ordnance, parachutes, and uniforms. Dual use equipment, which can have application in both military and civilian sectors, is included when its primary mission is identified as military. The building of defense production facilities and licensing fees paid as royalties for the production of military equipment are included when they are contained in military transfer agreements. There have been no international transfers of purely strategic weaponry. Military services such as training, supply operations, equipment repair, technical assistance, and construction are included where data are available. Excluded are foodstuffs, medical equipment, petroleum products and other supplies.

Redefinition of US Arms Exports. The scope of US arms exports data was modified in the *WMEAT 1995* edition. These exports include both government-to-government transfers under the Foreign Military Sales (FMS), Military Assistance Program (MAP), and other programs administered by the Department of Defense, and commercial (enterprise-to-government) transfers licensed by the Department of State under International Traffic in Arms Regulations. Under the previous practice, the materiel component (arms,

equipment, and “hardware” items) of FMS and MAP sales was included, while the military services component was excluded (although the magnitude and general destination of the omitted services was reported in these Statistical Notes).

Beginning with the previous edition, both the materiel and the military services components of FMS and other government-to-government sales (such as the International Military Education and Training Program—IMET) are included in total US arms exports as reported here. The commercial sales category, covering both materiel and military services, was included in its entirety.

The omission of FMS and other military services prior to the previous edition had been intended to improve comparability with available estimates of the arms exports of other countries, which tended to contain a much smaller services component and/or were subject to significant underestimation (services being less easily observed). The increasing importance of these services and the desire to present a full picture of US arms exports consistent with other sources prompted the change to inclusion. Users should be aware, however, of both the lower true share of services in other countries’ arms exports and the tendency to underestimate them. It should also be noted that a portion of the IMET program is devoted to programs that promote improved civil-military relations.

The change in scope of US arms exports increased their overall volume by amounts ranging over the last decade from \$2.3 billion (current dollars) to \$3.7 billion for deliveries and \$2.3 billion to \$7.3 billion for agreements.

The statistics contained in Tables II, III and part of IV are estimates of the value of goods actually delivered during the reference year, in contrast both to payments and the value of programs, agreements, contracts, or orders concluded during the period, which are expected to result in future deliveries. However, summary data on arms transfer agreements are presented in part of Table IV. Both deliveries and agreements data represent arms transfers to governments and do not include the value of arms obtained by sub-national groups.

Figures for US arms exports are for fiscal years as reported by the US Departments of Defense and State. Data on US arms export agreements shown in Table IV have the same coverage as deliveries data. Commercial agreements are here taken to equal deliveries, since agreements data as such are not available and data on commercial licenses issued are not considered sufficiently indicative.

US Arms Imports. US arms import data in this and the previous four editions are revised upward substantially from earlier editions. The present series consists of data obtained from the Department of Commerce, Bureau of

Economic Analysis (BEA), including (a) imports of military-type (formerly “special category”) goods, as compiled by the Bureau of the Census, and (b) Department of Defense direct expenditures abroad for major equipment, as compiled from DOD data by BEA. The goods in (a) include: complete military aircraft, all types; engines and turbines for military aircraft; military trucks, armored vehicles, etc.; military (naval) ships and boats; tanks, artillery, missiles, guns, and ammunition; military apparel and footwear; and other military goods, equipment, and parts.

Data on countries other than the United States are estimates by US Government sources. Arms transfer data for the Soviet Union and other former communist countries are approximations based on limited information.¹⁰

It should be noted that the arms transfer estimates for the most recent year, and to a lesser extent for several preceding years, tend to be understated. This applies to both foreign and US arms exports. In the former case, information on transfers comes from a variety of sources and is sometimes acquired and processed with a considerable time lag. In the US case, commercial arms transfer licenses are now valid for three years, causing a delay in the reporting of deliveries made on them to statistical agencies. Data for the most recent two years in Main Statistical Tables II, III, and IV therefore can be expected to undergo some upward revision in succeeding editions.

Close comparisons between the estimated values shown for arms transfers and for GNP and military expenditures are not warranted. Frequently, weapons prices do not reflect true production costs. Furthermore, much of the international arms trade involves offset or barter arrangements, multiyear loans, discounted prices, third party payments, and partial debt forgiveness. Acquisition of armaments thus may not [necessarily] impose the burden on an economy, whether in the same or in other years, that is implied by the estimated equivalent US dollar value of the shipment. Therefore, the value of arms imports should be compared to other categories of data with care.

Total Imports and Exports

The values for imports and exports cover merchandise transactions and come mainly from International Financial Statistics published by the IMF. The trade figures for presently and formerly communist countries are from the CIA’s *Handbook of Economic Statistics*, 1996 edition.

¹⁰ Soviet arms transfers and foreign trade data are taken from sources that present them directly in dollars; hence, particular caution should be used in comparing these statistics for arms transfers and foreign trade with other Soviet data.

Estimates for “NAs”

The “NA” entries in the Main Statistical Tables for a given country/variable/year signify that data considered sufficiently valid and reliable for presentation as such is not available. However, in all such cases, a rough or approximate estimate has been made and is used in aggregative estimates for the world, region, or other country group. This is done in order that the absence of data for a given country/year/variable not distort group totals unduly, and to permit the inclusion of the country in a ranking. Such “fill” estimates are based on a variety of grounds, such as available fragmentary information, previous trends, or assumptions as to the relationships between known and unknown variables.

Conversion of National Currencies to Dollars

All value data in the report are expressed in US dollars. For most countries, this requires the conversion into dollars of amounts expressed in national currencies at current (or “then-year”) prices. Available methods for doing so are less than satisfactory in all respects. The approach adopted in this series of reports relies on market or par exchange rates. In this method, current-price national currency data for an entire series of years is converted to current US dollars through the use of a single (base-year) exchange rate and two price indexes, one national and one US.

Basic Steps

The conversion approach used here consists essentially of three steps:

- a) Each country’s data, expressed originally in the national currency and at current prices, are “deflated” or put into constant-price terms, usually by means of the country’s implicit deflator for GNP as a whole. This GNP price index is used also for other variables—military and central government expenditures—because more appropriate price indices for those sectors are not generally available. National currency data for all years are expressed in prices of the conversion base year (1995 in this issue).
- b) These data are then divided by the average exchange rate in the base year between the national currency and the US dollar and thus converted into constant base-year (1995) dollars. Exchange rates are provided by the World Bank and are usually the annual average par/market rate, (the “rf” rate as designated by the International Monetary Fund).
- c) Data in constant dollars are then expressed in current dollars by multiplying by the US implicit GNP deflator.

The calculation may be illustrated by an example, assuming the following data:

1985 national military expenditures, in national currency at current (1985) prices.....4,600

1985 implicit GNP deflators (1995 = 100):

National.....55.5

US.....77.7

1995 exchange rate, national currency units per dollar.....15.92

Then, 1985 national military expenditures:

In constant 1995 dollars = $4,600 \div .555 \div 15.92 = 520.6$

In current (1985) dollars = $520.6 \times .777 = 404.5$

Advantages and Disadvantages

The use in this report of the same rate for converting all variables from national currencies to US dollars (with the exceptions noted below) means that the relationships among variables in national currency terms remain the same when those variables are expressed in dollars.

The conversion method used here has an advantage in that it takes into account national differences in the behavior of prices and, within each edition, avoids the distorting effect that can result from changes in exchange rates during the decade. It does not, however, allow for a number of other factors. One is that any within-country differences between the price indices for military or central government expenditures and for GNP are not taken into account. For example, indices for compensation of military personnel or prices of imported arms might behave differently from the overall index.

A more serious problem is that exchange rates in many cases do not adequately reflect the relative purchasing power of currencies. This has been demonstrated by a detailed study of purchasing power parities (PPPs) for the GNPs of a large number of countries.¹¹ This study found that the greater the disparity in the per capita income of countries, the greater the tendency for exchange rates to understate the value of the poorer country’s product, and that the understatement can be very large, reaching as much

¹¹ These PPPs have been estimated by the United Nations International Comparisons Project, a cooperative undertaking of the United Nations, the World Bank, and the University of Pennsylvania. See Irving Kravis, Alan Heston, and Robert Summers, *World Product and Income: International Comparisons of Real Gross Product*, published for the World Bank by the Johns Hopkins University Press, Baltimore and London, 1982.

as threefold in some cases. However, since this study did not estimate PPPs for military expenditures as such, it does not shed much light on how PPPs specific to military expenditures or arms purchases might differ from exchange rates or from either overall or other sector-specific PPPs.¹²

A disadvantage of the method used here in WMEAT is that the resulting conversion to current dollars for a given year can vary from edition to edition, despite the absence of any change in data for that year itself. The change is due solely to the rolling up of the exchange rate base year so as to make it more up-to-date, which usually means a change in the exchange rate used.

Such changes have been exceptionally large and frequent recently. This was due to two major factors: (1) the change from an appreciating and overvalued US dollar (until 1985) to a depreciating one and (2) the very high inflation rates and concomitantly large exchange rate movements occurring in a number of developing countries, together with the tendency of the exchange rate changes to undercompensate or overcompensate for relative price movements.

For a discussion of the extent of the changes and their impact on inter-country comparisons and group averages, see *WMEAT 1988*, pp. 135-136. The changes in exchange rates have not been as extensive in recent years, except for the growing number of high inflation countries.

Exceptions

There are several exceptions to the general conversion procedures discussed above. Data on arms transfers in value terms for all countries obtained by this Agency are already expressed in current dollars. (Original data in foreign currencies have generally been converted by the source at current exchange rates.) These current dollars are converted to constant 1995 dollars in the manner shown above. For the Soviet Union, GNP estimates in rubles are converted by the source into constant dollars at what is in effect an average US-and-Soviet-weighted PPP for GNP as a whole. This same conversion rate is also used for Soviet central government expenditures. Soviet military expenditures are in effect converted by the source at a military-sector PPP using only Soviet weights. (See also the discussion of Military Expenditures, above).

For other Warsaw Pact countries and China, the available estimates for GNP and military expenditures are

also already in terms that accounted for domestic price changes and have been converted to constant dollars using estimated purchasing power parities, rather than official exchange rates.

For successor states to the Soviet Union, Yugoslavia, and Czechoslovakia and other former Warsaw Pact countries, GNP in dollars is based on estimates of GNP per capita converted at PPPs and published by the World Bank in its *World Bank Atlas 1997*. Other variables are converted to dollars by multiplying a ratio of the variable to GNP in national currency by GNP in dollars. This is equivalent to using the GNP PPP to convert the other variable from national currency to dollars.

It should be noted that in all cases the relationship between current and constant dollars in this report is determined entirely by the US GNP deflator index. To facilitate reconversion to other constant-dollar bases if desired, this index, rebased here to 1995=100, is as follows:

1985	72.96	1990	87.01
1986	74.92	1991	90.50
1987	77.26	1992	92.97
1988	80.10	1993	95.39
1989	83.46	1994	97.55

Growth Rates

The average annual rates of real growth shown in Tables 1-5 of the Highlights are based on data in constant 1995 dollars from Main Tables I and II. The rates are calculated by a least-squares fit to all years of the period of the log form (to the base 10) of the following "compound interest" equation:

$$Y = A(1 + r/100)^T,$$

or

$$\text{Log}Y = \text{Log}A + \text{Log}(1 + r/100) \times T,$$

where Y is military expenditures (or other variable) in a given year, A is the initial value for year 0, T is time in years, and r is the growth rate in percent. This formula was used in all cases to provide a consistent measure of change and is not intended to provide the best fit for projection purposes.

¹² A United Nations expert group has studied the feasibility of constructing purchasing power parities and price indices for military expenditures (A/40/421, 13 August 1985). However, practical prospects for the future availability of usable military PPPs are poor due to the lack of underlying national data, especially on military prices.
